

MP 66.09 Culvert Replacement

Project Description

The Alaska Railroad Corporation (ARRC) is proposing the Replacement of the Culvert located at milepost (MP) 66.09 of the mainline. This culvert replacement is part of the Complex Culvert Program and addresses the need to repair or replace inadequate or failing culverts. Preventative maintenance and replacement is necessary to ensure track safety and service reliability for ARRC's customer needs. The new culvert will be approximately 108-inches in diameter and will be constructed for fish passage and area drainage requirements.

Project Benefits

Culvert replacement will address and improve the following conditions:

- Improve overall track stability and operating safety,
- Replace culvert that is in poor condition,
- Improve fish passage. and

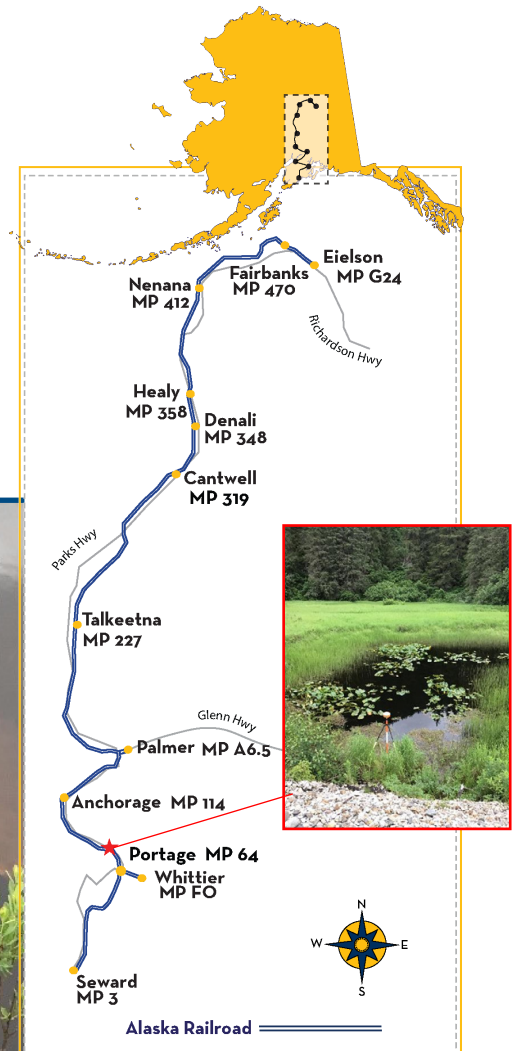

- Ensure passage of stormwater flows.

Project Status

- Environmental review and project design are underway.
- Once National Environmental Policy Act approval is received, final design and permitting will be completed; then ARRC will solicit a construction contractor to complete the work.

Culvert (underwater) located at MP 66.09 showing extensive wear and corrosion.

PROJECT FACTS

- Construction is anticipated to begin in fall of 2024 or summer 2025.
- Project completion is expected by fall 2025.

Cost and Funding

The project is expected to be funded by Federal Transit Administration formula funds.
