ALLIGARE
GLYPHSOATE
4 PLUS
Specimen Label

AVOID CONTACT OF HERBICIDE WITH FOLIAGE, GREEN STEMS, EXPOSED NON-WOODY ROOTS OR FRUIT OF CROPS, DESIRABLE PLANTS AND TREES, BECAUSE SEVERE INJURY OR DESTRUCTION MAY RESULT.

Read the "CONDITIONS OF SALE AND WARRANTY" statement at the end of the label before buying or using this product. If terms are not acceptable, return at once unopened.

ACTIVE INGREDIENT:
* Glyphosate, N-phosphonomethylglycine, in the form of its isopropylamine salt .................................................. 41.0% TOTAL: .................................................................................. 59.0%

OTHER INGREDIENTS: .................................................. 59.0%

Contains 480 grams per litre or 4 pounds per U.S. gallon of the active ingredient, glyphosate, in the form of its isopropylamine salt. Equivalent to 356 grams per litre or 3 pounds per U.S. gallon of the acid, glyphosate.

22S-IL-001**, 70099-MO-001*
42750-MO-001**
Letter(s) in lo number correspond(s) to superscript in EPA Est. No.

KEEPS OUT OF REACH OF CHILDREN

CAUTION

Manufactured for:
Alligare, LLC
13 N. 6th Street
Opelika, AL 36801

FIRST AID

IF IN EYES: • Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

IF SWALLOWED: • Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by the poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

IF INHALED: • Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

IF ON SKIN OR CLOTHING: • Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

CONTACT NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-424-8000 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION

Causes moderate eye irritation. Harmful if swallowed or inhaled. Avoid contact with eyes.

 Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling.

DOMESTIC ANIMALS: This product is considered to be relatively nontoxic to dogs and other domestic animals; however, ingestion of this product or large amounts of freshly sprayed vegetation may result in temporary gastrointestinal irritation (vomiting, diarrhea, colic, etc.). If such symptoms are observed, provide the animal with plenty of fluids to prevent dehydration. Call a veterinarian if symptoms persist for more than 24 hours.

PERSONAL PROTECTIVE EQUIPMENT: (PPE)

Applicators and other handlers must wear: long-sleeved shirt and long pants, shoes plus socks and protective eyewear. Follow manufacturer's instructions for cleaning and storing PPE (Personal Protective Equipment). If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclose bags, or aircraft in a manner that meets the requirements listed in Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240 (d) (4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations:
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing immediately if pesticide gets inside. Wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsate.

PHYSICAL OR CHEMICAL HAZARDS

Spray solutions of this product should be mixed, stored and applied using only stainless steel, aluminum, fiberglass, plastic or fiberglass-lined steel containers.

DO NOT MIX, STORE OR APPLY THIS PRODUCT OR SPRAY SOLUTIONS OF THIS PRODUCT WITH GALVANIZED STEEL OR UNELECTRIZED STEEL (EXCEPT STAINLESS STEEL) CONTAINERS OR SPRAY BANS. This product or spray solutions of this product react with such containers and tanks to produce hydrogen gas which may form a highly combustible gas mixture. This gas mixture could flash or explode, causing serious personal injury. If ignited by open flames, spark, welder's torch, lighted cigarette or other ignition source.

Read the entire label before using this product. Use only according to label instructions.

Read the "CONDITIONS OF SALE AND WARRANTY" statement at the end of the label before buying or using. If terms are not acceptable, return at once unopened.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulations.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 190. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, in covers, waterproof gloves, shoes plus socks.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 190). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep people and pets off treated areas until spray solution has dried to prevent transfer of this product onto desirable vegetation.
STORAGE AND DISPOSAL
Do not contaminate water, foodstuffs, feed or soil by storage or disposal.

Pellet Storage: Store above 10°F (-12°C) to keep product from crystallizing. Crystallize will settle to the bottom. If allowed to crystallize, place in a warm room 68°F (20°C) for several days to reinduce and roll or shake container or redissolve in mini- bulk or bulk container to mix well before using.

Pellet Disposal: Wash waste resulting from the use of this product that cannot be used or chemically repackaged should be disposed of in a landfill approved for pesticide disposal or in accordance with applicable Federal, State or local procedures. Empty container retains vapor and product residue. Observe all labeled safeguards until container is completely cleaned, conditioned, or destroyed.

Container Disposal: Nonrefillable container. Do not reuse or refill this container. Tinkle inside container (or equivalent) promptly after emptying.

Refillable container ≤ 6 gallons. 3 times as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinse for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

Nonrefillable container > 6 gallons. 4 times as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinse into application equipment or a mix tank or store rinse for later use or disposal. Repeat the procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

PRODUCT INFORMATION
Product Description: This product is a postemergent, systemic herbicide with no soil residual activity. It is generally nonselective and gives broad-spectrum control of many annual weeds, perennial weeds, woody brush and trees. It is formulated as a water-soluble liquid. It may be applied through most standard Industrial or field-type sprayers after dilution and thorough mixing with water or other carriers according to label Instructions. Ammonium sulfate may be used. See the MIXING section of this label for instructions.

Time to Symptoms: This product moves through the plant from the point of foliage contact and into the root system. Visible effects on most annual weeds occur within 2 to 4 days, but on most perennial weeds may not occur for 7 days or more. Extremely cool or cloudy weather following treatment may slow activity of this product and delay development of visual symptoms. Visible effects are a gradual wilting of the plant, followed by the plant parts advancing to complete browning of aboveground growth and deterioration of underground plant parts.

Stage of Weeds: Annual weeds are easiest to control when they are small. Best control of most perennial weeds is obtained when treatment is made at late growth stages approaching maturity. Refer to the annual, perennial, woody brush and trees rate tables for recommendations for specific weeds.

Always use the higher rate of this product per acre within the specified range when weed growth is heavy or coarse or weeds are growing in an undisturbed (noncultivated) area.

Do not treat weeds under poor growing conditions such as drought stress, disease or insect damage, as reduced weed control may result. Reduced results may also occur when treating weeds heavily covered with dust.

Cultural Considerations: Reduced control may result when applications are made to annual or perennial weeds that have been mowed, grazed, cut, and have not been allowed to regrow to the specified size for treatment.

Rainfastness: Heavy rainfall soon after application may wash this product off the foliage and a repeat application may be required for adequate control.

Spray Coverage: For best results, spray coverage should be uniform and complete. Do not spray weed foliage to the point of runoff.

Mode of Action: The active ingreident in this product inhibates an enzyme found only in plants that is essential to formation of protein amino acids.

No Soil Activity: Weeds must be emergent at the time of application to be controlled by this product. Weeds germinating from seed after applicaiton will not be controlled. Unemerged plants arising from untreated underground rhizomes or root stocks of perennials will not be affected by the herbicide and will continue to grow.

When this product comes in contact with soil it is bound to soil particles. Under specified use situations, once this product is bound to soil particles, it is not available for plant uptake and will not harm off-site vegetation where roots grow into the treated area or if the soil is leached off. The long affinity of this product for soil particles prevents this product from leaching out of the soil profile and entering ground water.

Biological Degradation: Degradation of this product is primarily a biological process carried out by soil microbes.

Volatility: Glyphosate Plus is non-volatile. Therefore, it cannot move as a vapor after application to affect nearby vegetation.

Textology: Caution to workers and other applicators generally is expected to pose minimal risks based on results of short-term toxicity studies. Glyphosate has been thoroughly tested and determined not to cause cancer or other adverse long-term health effects.

Tank Mixing: This product does not provide residual weed control. For subsequent residual weed control, follow a label-approved herbicide program. Read and carefully observe the cautionary statements and all other information appearing on the label of all herbicides used. Use according to the most restrictive label directions for each product in the mixture.

Buyer and all users are responsible for all loss or damage in connection with the use or handling of mixtures of this product with herbicides or other materials that are not expressly specified in this label. Mixing this product with herbicides or other materials not specified on this label may result in reduced performance.

Annual Maximum Use Rate: Except as otherwise specified in a crop section of this label, the combined total of all treatments must not exceed 8 quarts of this product per acre per year.

For non-agricultural use, the combined total of all treatments must not exceed 10.8 quarts of this product per acre per year. Non-agricultural uses include airports, apartment complexes, Christmas tree farms, ditch banks, dry ditches, dry canals, fences, golf courses, industrial sites, lumber yards, manufacturing sites, office complexes, ornamental nurseries, parks, parking areas, petroleum tank farms and pumping installations, railroad, recreational areas, residential areas, roadsides, sod or turf seed farms, schools, storage areas, utility substations, waste farms, and other public areas.

ATTENTION
AVERAGE CONTACT OF HERBICIDE WITH FOLIAGE, GREEN STALKS, EXPOSED NON- MUYTOY RINGS OR BUDS FOR FUTURE GROWTH IS INJURY AND TESTED. REDUCE SEVERE INJURY OR DESTRUCTION MAY RESULT.

AVOID DRIFT. EXTREME CARE MUST BE USED WHEN APPLYING THIS PRODUCT TO PREVENT INJURY TO DESIRABLE PLANTS AND CROPS.

Do not allow the herbicide solution to mix, drift, drip or splash onto desirable vegetation since minute quantities of this product can cause severe damage or destruction to the crop, plants or other areas on which treatment was not intended. This likelihood of injury occurring from the use of this product increases when winds are gusty, as wind velocity increases, when wind direction is consistently changing or when there are other meteorological conditions that favor spray drift. When spraying, avoid combinations of pressure and nozzle type that will result in splatter or fine particles (mist) which are likely to drift.

AVOID APPLYING AT EXCESSIVE SPEED OR PRESSURE.

NOTE: Use of this product in any manner not consistent with this label may result in injury to persons, animals or crops, or other unintended consequences. Keep container closed to prevent spills and contamination.

MIXING
Clean sprayer parts immediately after using this product by thoroughly flushing with water.

REDUCED RESULTS MAY OCCUR IF WATER CONTAINING SOIL IS USED, SUCH AS VISCIOUS MUDDY WATER OR WATER FROM FONDS AND DITCHES THAT IS NOT CLEAR.

MIXING WITH WATER

This product mixes readily with water. Mix spray solutions of this product as follows: Fill the mixing or spray tank with the required amount of water. Add the specified amount of this product near the end of the filling process and mix well. Use caution to avoid siphoning back into the carrier source. Use approved anti-back-siphoning devices where required by state or local regulations. During mixing and application, boating of the spray solution may occur. To prevent or minimize foam, avoid the use of mechanical agitators, terminate by-pass and return lines at the bottom of the tank and, if needed, use an approved anti-back-siphoning device.

Tank Mixing Procedure
Mix labeled tank mixtures of this product with water as follows:
1. Place a 20 to 35-gallon screen or wetting basket over filling port.
2. Through the screen, fill the spray tank one-half full with water and start agitation.
3. If a wettable powder is used, make a slurry with the water carrier, and add it SLOWLY through the screen into the tank. Continue agitation.
4. If a flowable formulation is used, premix one part flowable with one part water. Add diluted mixture SLOWLY through the screen into the tank. Continue agitation.
5. If an emulsifiable concentrate formulation is used, premix one part emulsifiable concentrate with two parts water. Add diluted mixture slowly through the screen into the tank. Continue agitation.
6. Continue filling the spray tank with water and add the required amount of this product near the end of the filling process.
7. Add individual formulations to the spray tank as follows: wettable powder, flowable, emulsifiable concentrate, drift control additive and water soluble liquid.

Maintain good agitation at all times until contents of the tank are sprayed. If the spray mixture is allowed to settle, thorough agitation is required to reaupend the mixture before spraying is resumed.

Keep by-pass line or near the bottom of the tank to minimize foaming. Screen size in nozzle or fine strainers should be no finer than 50 mesh.

Always predetermine the compatibility of labeled tank mixtures of this product with water carrier by mixing small proportional quantities in advance.

Refer to the "Tank Mixing" section of "PRODUCT INFORMATION" for additional precautions.
GLYPHOSATE 4 PLUS

Mixing for Hand-held Sprayers

Prepare the desired volume of spray solution by mixing the amount of this product in water as shown in the following table:

<table>
<thead>
<tr>
<th>Desired Volume</th>
<th>Amount of Glyphosate Plus %</th>
<th>1%</th>
<th>2%</th>
<th>5%</th>
<th>10%</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 gal</td>
<td>2 tsp oz</td>
<td>1-1/2 oz</td>
<td>2 oz</td>
<td>5 oz</td>
<td>15 oz</td>
</tr>
<tr>
<td>25 gal</td>
<td>1 gal</td>
<td>1 gal</td>
<td>1-1/2 gal</td>
<td>2 gal</td>
<td>5 gal</td>
</tr>
</tbody>
</table>

2 tablespoons = 1 fluid ounce

For use in knapsack sprayers, it is suggested that the specified amount of this product be mixed with water in a larger container. Fill sprayer with the mixed solution.

Ammonium Sulfate

The addition of 1 to 2 percent ammonium sulfate by weight or 8.5 to 17 pounds per 1000 gallons of water may increase the performance of this product, particularly when tank mixed with certain residual herbicides on annual and perennial weeds. The equivalent rate of ammonium sulfate in a liquid formulation may also be used. Ensure that ammonium sulfate is completely dissolved in the spray tank before adding herbicides. Thoroughly rinse the spray system with clean water after use to reduce corrosion.

NOTE: When using ammonium sulfate, apply this product at rates listed in this label. Lower rates will result in reduced performance.

Colorants or Dyes

Agriculturally approved colorants or masking dyes may be added to this product. Colorants or dyes used in spray solutions of this product may reduce performance, especially at lower rates or dilutions. Use colorants or dyes according to the manufacturer's recommendations.

Drift Control Additives

Drift control additives may be used with all equipment types, except wiper applicators, spray socks and CO2 equipment. When a drift control additive is used, read and carefully observe the cautionary statements and all other information appearing on the additive label.

APPLICATION EQUIPMENT AND TECHNIQUES

Do not apply this product through any type of irrigation system.

This product may be applied with the following application equipment:

- Aerial – Fixed Wing and Helicopter
- Ground Broadcast Spray – Boom or boomless systems, pull-type sprayer, floaters, pick-up sprayers, spray coops and other ground broadcast equipment.
- Hand-Held and High-Volume Spray Equipment – Knapsack and backpack sprayers, pump-up pressure sprayers, owners, hoppers, mistblowers, lances and other hand-held and motorized spray equipment are used to direct the spray onto weed foliage.

This product is not registered in California or Arizona for use in mastloubers.

- Selective Equipment – Re-circulating sprayers, shielded and hooded sprayers, wiper applicators and sponge bars.
- Injection Systems – Aerial or ground injection sprayers.

Controlled Droplet Applicator (CDA) – Hand-held or boom-mounted applicators which produce a spray consisting of a narrow range of droplet sizes.

APPLY THESE SPRAY SOLUTIONS IN PROPERLY MAINTAINED AND CALIBRATED EQUIPMENT CAPABLE OF DELIVERING DESIRED VOLUMES.

AERIAL SPRAY DRIFT MANAGEMENT

SPRAY DRIFT MANAGEMENT

AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR. The interaction of many equipment-and-weather-related factors determine the potential for spray drift. The applicator is responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-target movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

1. The distance of the outer most nozzles on the boom must not exceed 1/2 the length of the wingspan or rotor.
2. Nozzles must always point back toward the air stream and never be pointed downward more than 45 degrees.

Where states have more stringent regulations, they should be observed.

The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory.

AERIAL SPRAY DRIFT MANAGEMENT

AERIAL SPRAY DRIFT MANAGEMENT

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (See Wind, Temperature and Humidity, and Temperature Inversions).

CONTROLLING DROPLET SIZE

- Volume – Use high flow rate nozzles to apply the Highest practical spray volume. Nozzles with higher rated flows produce larger droplets, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (See Wind, Temperature and Humidity, and Temperature Inversions).
- Pressure – Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types lower pressures produce larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of nozzles – Use the minimum number of nozzles that provide uniform coverage.
- Nozzle Orientation – Orienting nozzles so the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- Nozzle Type – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

BOOM LENGTH

For some use patterns, reducing the effective boom length to less than 1/2 of the wingspan or rotor length may further reduce drift without reducing swath width.

APPLICATION HEIGHT

Applications must not be made at a height greater than 10 feet above the top of the target plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

SWATH ADJUSTMENT

When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

WIND

Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high invasion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

TEMPERATURE AND HUMIDITY

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

TEMPERATURE INVERSIONS

Applications must not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperatures inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source on an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under the wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

SENSITIVE AREAS

The pesticide must only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas).

AERIAL EQUIPMENT

DO NOT APPLY THIS PRODUCT USING AERIAL SPRAY EQUIPMENT EXCEPT UNDER CONDITIONS AS SPECIFIED WITHIN THIS LABEL. This product plus disperse tank mixtures may not be applied by air in California.

Use the specified rates of this herbicide in 3 to 15 gallons of water per acre unless otherwise specified on this label. Unless otherwise specified, do not exceed 1 quart per acre. Aerial applications of this product may be made in amino acid cropping conventional tillage systems, follow and reduced tillage systems and pre-emergent applications. Refer to the individual use area sections of this label for specific volumes and application rates.

Avoid direct application to any body of water.

AVOID DRIFT – DO NOT APPLY DURING LOW-LEVEL INVERSION CONDITIONS WHEN WINDS ARE GUSTY OR UNDER ANY OTHER CONDITION WHICH FAVORS DRIFT. DRIFT MAY CAUSE DAMAGE TO ANY VEGETATION CONTACTED TO WHICH TREATMENT IS NOT INTENDED. TO PREVENT INJURY TO ADJACENT DESIRABLE VEGETATION, APPROPRIATE BUFFER ZONES MUST BE MAINTAINED.

Low-drift sprays are less likely to drift therefore do not use nozzles or nozzle configurations
which disperse spray as fine spray droplets. Do not angle nozzles toward the airstream and do not increase spray volume by increasing nozzle pressure.

Ensure uniform application — To avoid streaked, uneven or overlapped application, use appropriate marking devices.

Thoroughly wash aircraft, especially landing gear, after each day of spraying to remove residue of this product accumulates during spraying or from spills. PROLONGED EXPOSURE OF THIS PRODUCT TO UNCOATED STEEL SURFACES MAY RESULT IN CORROSION AND POSSIBLE FAILURE OF THE PART. LANDING GEAR ARE MOST SUSCEPTIBLE. THE MAINTENANCE OF AN ORGANIC COATING (paint), which meets aerospace specification MIL-C-88413, may prevent corrosion.

For Aerial Application in California Only
Aerial applications of this product are allowed in the following situations:
1. In fallow and reduced tillage systems prior to the emergence or transplanting of labeled crops.
2. In aliens and pasture renovation applications.

Do not plant subsequent crops other than those listed in the label booked for 30 days following application.

When tank mixing this product with 2,4-D for aerial applications, only 2,4-D amine formulations may be used. This tank mixture may be used for fallow and reduced tillage systems and aliens and pasture renovation applications only.

DO NOT EXCEED A MAXIMUM RATE OF 2 QUARTS PER ACRE OF THIS PRODUCT WHEN MAKING APPLICATIONS BY AIR IN FALLOW AND REDUCED TILLAGE SYSTEMS AND ALFALFA AND PASTURE RENOVATION APPLICATIONS.

DO NOT EXCEED A MAXIMUM RATE OF 1 QUART PER ACRE OF THIS PRODUCT WHEN MAKING APPLICATIONS BY AIR IN ALFALFA, CORN, COTTON, WHEAT, ROUNDUP READY® COTTON AND ROUNDUP READY® COTTON PRIOR TO HARVEST. THIS RESTRICTION ALSO APPLIES TO OVER-THE-TOP APPLICATIONS IN ROUNDUP READY® COTTON AND COTTON.

Aerial Equipment
Use the specified rates of this product in 3 to 15 gallons of water per acre.

Use the following guidelines when aerial applications are made near crops or desirable panemisc vegetation after bloom break and before total leaf drop, and/or near other desirable vegetation or annual crops.

1. Do not apply within 100 feet of all desirable vegetation or crop(s).
2. If wind up to 8 miles per hour is blowing toward desirable vegetation or crop(s), do not apply within 800 feet of the desirable vegetation or crop(s).
3. Winds blowing from 8 to 10 miles per hour toward desirable vegetation or crop(s) may require buffer zones in excess of 1000 feet.
4. Do not apply when winds are in excess of 10 miles per hour or when inversion conditions exist.

For Aerial Application in Fresno County, California
Only From February 16 through March 31 Only

Applicable Area:
The area contained inside the following boundaries within Fresno County, California.
North: Fresno County line
South: Fresno County line
East: State Highway 99
West: Fresno County line

Product Information:
Always read and follow the label directions and precautionary statements for all products used in the aerial application.

Observe the following directions to minimize off-site movement during aerial application of this product. Minimization of off-site movement is the responsibility of the grower, Pest Control Advisor, and the applicator.

Written Directions:
Written directions MUST be submitted by or on behalf of the applicator to the Fresno County Agricultural Commissioner 24 hours prior to the application. These written directions MUST state the proximity of surrounding crops, and that conditions of each manufacturer's product label and this label have been satisfied.

Aerial Applicator Training and Equipment:
Aerial application of this product is limited to pilots who have successfully completed a Fresno County Agricultural Commissioner and California Department of Pesticide Regulation approved training program for aerial application of herbicides. All aircraft must be inspected, critiqued in flight and certified at a Fresno County Agricultural Commissioner approved fly-in. Test and calibrate spray equipment at intervals sufficient to ensure that proper rates of herbicides and adjuvants are being applied during commercial use. Applicator must document such calibrations and testing. Demonstration of performance at Fresno County Agricultural Commissioner approved fly-in constitutes such documentation, or other written records showing calculations and measurements of flight and spray parameters acceptable to the Fresno County Agricultural Commissioner.

Applications at Night:
Do not apply this product by air earlier than 30 minutes prior to sunrise and/or later than 30 minutes after sunset without prior permission from the Fresno County Agricultural Commissioner.

Note: For aerial application from April 1 through February 14, refer to the "For Aerial Application in California Only" section of this label.

Ground Broadcast Equipment
Use the specified rates of this product in 3 to 40 gallons of water per acre as a broadcast spray unless otherwise specified. At densities of weeds increases, spray volume should be increased within the specified range to ensure complete coverage. Carefully select proper nozzles to avoid spraying a fine mist. For best results with ground application equipment, use flat fan nozzles. Check for even distribution of spray droplets.

Hand-Held and High-Volume Equipment
Apply to foliage of vegetation to be controlled. For applications made on a spray-to-wet basis, spray coverage should be uniform and complete. Do not spray to the point of runoff. Use coarse sprays only.

For control of weeds listed in the annual weed rates table, apply a 0.5 percent solution of this product to weeds less than 6 inches in height or narrower length. Apply prior to seedhead formation in grass or bud formation in broadleaf weeds. For annual weeds over 6 inches tall, or unless otherwise specified, use a 1 percent solution.

For best results, use a 2 percent solution on harder-to-control perennials, such as berseem clover, c ceremonial, hemp dogbane, milkweed and Canada thistle.

When using application methods which result in less than complete coverage, use a 5 percent solution for annual and perennial weeds and a 5 to 10 percent solution for woody brush and trees.

Selective Equipment
This product may be applied through re-circulating spray systems, shielded applicators, hooded sprayers, wiper application or sponge bars after thorough flushing and thorough mixing with water to labeled weeds growing in any non-agricultural use site specified on this label and only when specifically listed in the crop groupings.

A recirculating spray system directs the spray solution onto weeds growing above desirable vegetation, while spray solution not intercepted by weeds is collected and returned to the spray tank for reuse.

A shielded or hooded applicator directs the herbicide solution onto weeds, while shielding desirable vegetation from the herbicide.

A wiper or sponge applicator applies the herbicide solution onto weeds by rubbing the weed with an absorbent material containing the herbicide solution.

AVOID CONTACT OF HERBICIDE WITH DESIRABLE VEGETATION.

Contact of the herbicide solution with desirable vegetation may result in damage or destruction. Applicators using above desirable vegetation should be adjusted so that the lowest spray stream or wiper contact point is at least 2 inches above the desirable vegetation. Droplets, mist, foam or splatter of the herbicide solution settling on desirable vegetation may result in discoloration, stunting or destruction.

Applications made above the crops should be made when the weeds are a minimum of 6 inches above the desirable vegetation. Better results may be obtained when more of the weed is exposed to the herbicide solution. Weeds not contacted by the herbicide solution will not be affected. This may occur in dense clumps, severe infestations or when the height of the weeds varies so that not all weeds are contacted. In these instances, repeat treatment may be necessary.

Shielded and hooded applicators
Use neonicotinoids that provide uniform coverage within the treated area. Keep shields on these sprayers adjusted to protect desirable vegetation. EXTREME CARE MUST BE EXERCISED TO AVOID CONTACT OF HERBICIDE WITH DESIRABLE VEGETATION.

Wiper applicators and sponge bars
Wiper applicators are devices that physically wipe appropriate amounts of this product directly onto the weed.

Equipment must be designed, maintained and operated to prevent the herbicide solution from contacting desirable vegetation. Operate this equipment at ground speeds no greater than 3 mph. Performance may be improved by reducing speed in areas of heavy weed infestations to ensure adequate wiper saturation. Better results may be obtained if 2 applications are made in opposite directions.

Avoid leakage or dripping onto desirable vegetation. Adjust height of applicator to ensure adequate contact with weeds. Keep wiping surfaces clean. Be aware that, on sloping ground, the herbicide solution may migrate, causing dripping on the lower end and drying of the weeds on the upper end of a wiper applicator.

Do not use wiper equipment when weeds are wet.

Mix only the amount of solution to be used during a 1-day period, as reduced activity may result from use of leftover solutions. Clean wiper parts immediately after using this product by thoroughly flushing with water.

Do not add surfactant to the herbicide solution.

For Rope or Sponge Wiper Applicators — Mix 1 gallon of this product in 2 gallons of water to prepare a 33 percent solution. Apply this solution to weeds listed in this section.

For Peronov-Plastic Applicators — Solutions ranging from 33 to 100 percent of this product in water may be used in peronov-plastic wiper applications.
**GLYPHOSATE 4 PLUS**

When applied as specified, this product CONTROLS the following weeds:

- Corn, volunteer: Sicklepod
- Parthenium, Texas: Spanish needle
- Rye, common: Starter, bristlecress
- Shattercane

When applied as specified, this product SUPPRESSES the following weeds:

- Baggsneaed, Florida: Ragweed, common
- Bermudagrass: Ragweed, giant
- Dngafove, hemp: Smutgrass
- Dgfermel: Sunflower
- G infoesegrass: Tesina, Canada
- Johnsmeangress: Tesina, musk
- Miloweed: Vaseergress
- Nightraid, silverleaf: Velvedrest
- Pigweed, redroot

**Injection Systems**

This product may be used in aerial or ground injection spray systems. It may be used as a liquid concentrate or diluted prior to spraying into the spray stream. Do not mix this product with the concentrate of other products when using injection systems.

**CDA Equipment**

The rate of this product applied per acre by vehicle-mounted CDA equipment must not be less than the amount listed in this label when applied by conventional broadcast equipment. For vehicle-mounted CDA equipment, apply 9 to 15 gallons of water per acre.

For the control of annual weeds with hand-held CDA units, apply a 20 percent solution of this product at a flow rate of 2 fluid ounces per minute and a walking speed of 1.6 mph (1 quart per acre). For the control of perennial weeds, apply 20 to 40 percent solution of this product at a flow rate of 2 fluid ounces per minute and a walking speed of 0.75 mph (2 to 4 quarts per acre).

Controlled droplet application equipment produces a spray pattern which is not easily visible. Extreme care must be exercised to avoid spray or drift contacting the foliage or any other green tissues of desirable vegetation, as damage or destruction may result.

**CROPS (Alphabetic)**

This section is organized alphabetically by crop category. There may be several labeled crops listed in a crop category. Unless otherwise specified, applications may be made to control weeds listed in the annual, perennial and woody brush tables. Also refer to the "SELECTIVE EQUIPMENT" section.

For any crop not listed in this "CROPS" section, applications must be made at least 30 days prior to planting.

For broadcast post-emergent treatments, do not harvest or feed treated vegetation for 8 weeks following application, unless otherwise specified. When applying this product prior to transplanting crops into plastic mulch, residues may be removed from the plastic by 0.5 inches of water via sprinkler irrigation or natural rainfall. The maximum use rates stated throughout this product's labeling apply to this product contained with the use of all other herbicides containing glyphosate or sulfosate as the active ingredients, whether applied as mixtures or separately. Calculate application rates and ensure that the total use of this and other glyphosate or sulfosate containing products does not exceed stated maximum use rate.

**Alfalfa, Clover, and Other Forage Legumes**

**LABELD CROPS:** Alfalfa, clover, sudan, lespedeza, lupin, safflower, trefoil, velvet bean, vetch, crown vetch, milk vetch

**TYPES OF APPLICATIONS:** Dormant, preplant, preemergence, ai-planting, spot treatment, wiper applications, renovation, preharvest

**Dormant (Alfalfa only)**

**USE INSTRUCTIONS:** This product will control or suppress many weeds including quackgrass, downy brome and cheatgrass in dormant alfalfa. Apply to 12 ounces per acre of this product. Apply to the spring alfalfa that is dormant. Applications should be made before spring temperatures have warmed to encourage resumption of weed growth, but prior to initiation of trifoliate leaf expansion of the alfalfa. Applications made after emasculation of the first trifoliate leaf of the alfalfa will cause growth reduction and reduced crop yield.

**PRECAUTIONS, RESTRICTIONS:** Do not use ammonium sulfate when spraying dormant alfalfa with Glyphosate 4 Plus. Do not use this product where a slight yield reduction in the first cutting of alfalfa cannot be tolerated. Do not mow more than one application per year. Allow 56 hours after application before grazing livestock or harvesting. Slight discoloration of the alfalfa may occur, but the alfalfa will regrow and regrow under moist soil conditions as effects of this product wear off. Application of this product can cause crop injury. Any crop injury is the sole responsibility of the applicator.

**Prempt, Preemergence and Ai-planting**

**USE INSTRUCTIONS:** This product may be applied before, during or after planting alfalfa and clover. Applications must be made prior to emergence of the crop.

**PRECAUTIONS, RESTRICTIONS:** Remove domestic livestock before application and wait 6 weeks after application before grazing or harvesting.

**Preharvest (Alfalfa only)**

**USE INSTRUCTIONS:** This product may be used in declining alfalfa stands or any stand of alfalfa where crop protection is acceptable. This application will severely injure or destroy the stand of alfalfa. This product will control annual and perennial weeds including quackgrass, when applied prior to the harvest of alfalfa. The treated crop and weeds can be harvested and fed to livestock after 36 hours. Allow a minimum of 36 hours between application and harvest. Use up to 1 quart of this product per acre. Applications may be made at any time of the year. Make only one application to an existing stand of alfalfa per year. For control of quackgrass, apply in the spring, late summer or fall when quackgrass is actively growing. Treatments for quackgrass must be followed by deep tillage for complete control.

**PRECAUTIONS, RESTRICTIONS:** Do not apply more than 1 quart of this product per acre as a preharvest treatment. Do not use for alfalfa grown for seed, as a reduction in germination or vigor may occur.

**Spot treatment or Wiper applications (Alfalfa and Clover only)**

**USE INSTRUCTIONS:** This product may be applied as a spot treatment in alfalfa or clover. This product may be applied with wiper applicators to control or suppress the weeds listed under "WIPER APPLICATIONS" in the "SELECTIVE EQUIPMENT" section of this label. Applications may be made in the same area at 30-day intervals.

**PRECAUTIONS, RESTRICTIONS:** For spot treatment and wiper applications, apply in areas where the movement of domestic livestock can be controlled. No more than one-tenth of any acre should be treated at one time. Remove domestic livestock before application and wait 14 days after application before grazing livestock or harvesting.

**Renovation**

**USE INSTRUCTIONS:** This product may be applied as a broadcast spray to existing stands of alfalfa, clover, and other labeled forage legumes. Labeled crops may be planted into the treated area.

**PRECAUTIONS, RESTRICTIONS:** Remove domestic livestock before application and wait 6 weeks after application before grazing or harvesting.

**Asparagus**

**TYPES OF APPLICATIONS:** Preplant, preemergence, spot treatment, postharvest

**Preplant, Preemergence**

**USE INSTRUCTIONS:** This product may be applied prior to emergence of asparagus.

**PRECAUTIONS, RESTRICTIONS:** Do not apply within a week before the first spgers emerge.

**Spot treatment**

**USE INSTRUCTIONS:** This product may be applied immediately after cutting, but prior to the emergence of new speers.

**PRECAUTIONS, RESTRICTIONS:** Do not treat more than 10 percent of the total field area to be harvested. Do not harvest within 8 days of treatment.

**Postharvest**

**USE INSTRUCTIONS:** This product may be applied after the last harvest and all speers have been removed. If speers are allowed to regrw, delay application until new speers have developed. Delayed treatments should be applied as a directed or shielded spray in order to avoid contact of the spray with forage, silage or silos.

**PRECAUTIONS, RESTRICTIONS:** Direct contact of the spray with the asparagus may result in serious crop injury. Select and use specified types of spray equipment for postemergence postharvest applications. A directed spray is any application where the spray pattern is aligned in such a way as to avoid direct contact of the spray with the crop. A shielded spray is any application where a physical barrier is positioned and maintained between the spray and the crop to prevent contact of the spray with the crop.

**Cereal Crops**

**LABELD CROPS:** Barley, Budncharel, Killer (Pearl, Proso), Oats, Rice, Triticale, Triticale, Wheat (All), Wild rice.

**TYPES OF APPLICATIONS:** Preplant, preemergence, ai-planting, spot treatment (except rice), post-harvest, preharvest (wheat only), wiper applications (wheat only)

Do not treat rice fields or levees when the field contains floodwater.

**Preplant, Preemergence and Ai-planting**

**USE INSTRUCTIONS:** This product may be applied before, during or after planting of cereal crops. Applications must be made prior to emergence of the crop.

**Spot treatment (except rice)**

**USE INSTRUCTIONS:** This product may be applied as a spot treatment in cereal crops. Apply this product before heading in small grains.

**PRECAUTIONS, RESTRICTIONS:** Do not treat more than 10 percent of the total field area to be harvested. The crop growing in the treated area will be killed. Take care to avoid drift or spray outside target areas for the same reason.
GLYPHOSATE 4 PLUS

Postharvest

USE INSTRUCTIONS: This product may be applied after harvest of cereal crops. Higher rates may be required for control of large weeds which were growing in the crop at the time of harvest. Tank mixtures with 2,4-D or dicamba may be used.

PRECAUTIONS, RESTRICTIONS: For any crop not listed on this label, applications must be made at least 30 days prior to planting the next crop. Do not harvest or feed treated vegetation for 8 weeks following application.

Preharvest (wheat only)

USE INSTRUCTIONS: This product provides weed control when applied prior to harvest of wheat. Apply after the hard-dough stage of grain (30% or less grain moisture) and at least 7 days prior to harvest. Wheat stubble may be grazed immediately after harvest.

This product may be applied using either aerial or ground spray equipment. For ground applications, apply this product in 18 to 30 gallons of water per acre. For aerial applications, apply this product in 3 to 10 gallons of water per acre.

PRECAUTIONS, RESTRICTIONS: Do not apply more than 1 quart of this product per acre. Do not apply to wheat grown for seed, as a reduction in germination or vigor may occur.

Wiper applications (wheat only)

USE INSTRUCTIONS: Wiper applications may be used in wheat. To control common rye or cereal rye, apply after the weeds have headed and achieved maximum growth, when the rye is at least 6 inches above the wheat crop.

PRECAUTIONS, RESTRICTIONS: Allow at least 35 days between application and harvest. Do not use roller applications.

For nonselective control of listed annual weeds in small grain cropping systems (South Dakota only)

USE INSTRUCTIONS: For ground applications, use 3 to 5 gallons of water per acre. For aerial applications, use 2 to 3 gallons of water per acre.

PRECAUTIONS, RESTRICTIONS: The likelihood of injury occurring from the use of this product is greatest when winds are greater than or in excess of 5 miles per hour or when other conditions, including lower wind velocities, will allow spray drift to occur. Adjust boom height on ground equipment to prevent spraying of open or overgrown weeds. Avoid spraying when weeds are subject to moisture stress, when dust is on foliage, or when stress canopy covers the weeds.

Red Rice Control Prior To Planting Rice (Texas only)

USE INSTRUCTIONS: Apply 1.5 quarts of this product in 5 to 10 gallons of water per acre. Flush fields prior to application to obtain uniform germination and stand of red rice. Make application when the majority of the red rice plants are in the 2-leaf stage and no more than 4 inches tall. Red rice plants with less than 2 true leaves may only be partially controlled.

PRECAUTIONS, RESTRICTIONS: Avoid spraying during low humidity conditions, as reduced control may result. DO NOT TREAT RICE FIELDS OR LEVEES WHEN THE FIELDS CONVIN FLUID WATER. DO NOT RE-FLOOD TREATED FIELDS FOR 8 DAYS FOLLOWING APPLICATION.

Christmas Trees

TYPES OF APPLICATIONS: Post-directed, spot treatment, site preparation

Post-directed, Spot treatment

USE INSTRUCTIONS: This product may be used as a post-directed spray and spot treatment around established Christmas trees.

PRECAUTIONS, RESTRICTIONS: Desirable plants may be protected from the spray solution by using stakes or coverings made of cardboards or other impermeable material. DO NOT USE THIS PRODUCT AS AN OVER-THE-TOP BROADCAST SPRAY IN CHRISTMAS TREES. Care must be exercised to avoid contact of spray, drift or mist with foliage or green bark of established Christmas trees.

Site preparation

USE INSTRUCTIONS: This product may be used prior to planting Christmas trees.

PRECAUTIONS, RESTRICTIONS: Precautions should be taken to protect non-target plants during site preparation applications.

Citrus Crops

LABELED CROPS: Calamondin, Citronella, Citrus, Citrus Hybrid, Grapefruit, Kumquat, Lemon, Lime, Mandarin (tangerine), Orange (All), Pomegranate, Tangerine, Tanger

TYPES OF APPLICATIONS: Weed control, middle (between rows of trees), strips (in row of trees), selective equipment

NOTE: FOR GENERAL USE DIRECTIONS, SEE THE "TREE, NUT AND WINE (GENERALY) SECTION. THE FOLLOWING DIRECTIONS ARE SPECIFIC TO CITRUS CROPS.

Florida and Texas only: For budbreak or control of the weeds listed below, apply the specified rates of this product in 3 to 30 gallons of water per acre. Where weed foliage is dense, use 10 to 30 gallons of water per acre.

For postweed, apply 2 to 3 quarts of this product per acre. Apply in 20 to 30 gallons of water per acre when plants are actively growing. Use 2 quarts per acre when plants are less than 6 inches tall and 3 quarts per acre when plants are greater than 6 inches tall. If postweed is greater than 8 inches tall, the addition of Borstar® II or Hertrac® may improve control. Refer to the individual product labels for specific crop rates, geographic restrictions and precautionary statements.

Perennial weeds:

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 1 day between last application and harvest.

Conservation Reserve Program (CRP)

TYPES OF APPLICATIONS: Renovation (rotating out of CRP), site preparation, dormant, wiper

Rotating out of CRP, Site preparation

USE INSTRUCTIONS: This product may be used to prepare CRP land for crop production.

Dormant, Wiper

USE INSTRUCTIONS: This product may be used to suppress competitive growth and seed production of undesirable vegetation in CRP areas. Such applications may be made with wiper application equipment or as a broadcast or spot treatment to dormant CRP grasses. For selective applications with broadcast spray equipment, apply 12 to 16 fluid ounces of this product per acre in early spring before desirable CRP grasses, such as creeping and tall wheatgrass, break dormancy and initiate green growth. Late fall applications can be made after desirable perennial grasses have reached dormancy.

PRECAUTIONS, RESTRICTIONS: Some standing of CRP perennial grasses will occur if broadcast applications are made when plants are not dormant.

Corn

TYPES OF CORN: Field corn, seed corn, sweet corn and popcorn

TYPES OF APPLICATIONS: Preplant, preemergence, at-planting, spot treatment, hooded sprayers, preharvest, post-harvest

Preplant, Preemergence and At-planting

USE INSTRUCTIONS: This product may be applied before, during or after planting corn. Applications must be made prior to emergence of the crop.

The following tank mixtures may be applied before, during or after planting in conventional tillage systems, into a cover crop, established sod or in previous crop residue.

Apply these tank mixtures in 10 to 20 gallons of water or 10 to 60 gallons of nitrogen solution per acre. For Southern states, do not apply nitrogen solutions to tough-to-control grasses such as barnyardgrass, fall Panicum, brownfield signalgrass, annual ryegrass and any perennial weeds. See the map in the Annual Weeds section of this label for areas included in this recommendation.

Annual weeds – For difficult-to-control weeds such as fall Panicum, barnyardgrass, onagrange, shattercan and broadleaf signalgrass up to 2 inches tall, and Pennsylvania smartweed up to 6 inches tall, apply this product at 2 pints per acre. In these tank mixtures, for other labeled annual weeds, apply 1 to 1.5 pints of this product per acre when weeds are less than 6 inches tall, and 2 to 3 pints when weeds are over 6 inches tall.

PRECAUTIONS, RESTRICTIONS: Applications of 2,4-D or dicamba must be made at least 7 days prior to planting corn.

The tank mix recommendations in this section are not registered in California.
GLYPHOSATE 4 PLUS

SPOT TREATMENT

USE INSTRUCTIONS: For spot treatments, apply this product prior to silking of corn.

PRECAUTIONS, RESTRICTIONS: Do not treat more than 10 percent of the total field area to be harvested. The crop receiving spray in the treated area will be killed. Take care to avoid drift or spray outside target areas for the same reason.

HOODED SPRAYERS

USE INSTRUCTIONS: This product may be used through hooded sprayers for weed control between the rows of corn (all), including field corn, sweet corn and popcorn. Only hooded sprayers that completely enclose the spray pattern may be used.

A hooded sprayer is a type of self contained applicator. The spray pattern is completely enclosed on the top and all 4 sides by a hood, thereby shielding the crop from the spray solution. This equipment must be set up and operated in a manner that avoids bouncing or raising the hoods off the ground in any way. If the hoods are raised, spray particles may escape and come into contact with the crop, causing damage or destruction of the crop. The spray hoods must be operated on the ground or skimming across the ground. Tractor speed must be adjusted to avoid bouncing of the spray hoods. Avoid operation on rough or sloping ground where the spray hoods might be raised off the ground.

When applying to corn that is grown on raised beds, ensure that the hood is designed to completely enclose the spray solution. If necessary, extend the front and rear flaps of the hoods to reach the ground in deep furrows.

Follow these requirements:
1. The spray hoods must be operated on the ground or skimming across the ground.
2. Do not apply more than 1 quart of this product per acre per application.
3. Corn must be at least 12 inches tall, measured without extending leaves.
4. Leave at least 4 inches of untreated strip over the drill row. For example, if the crop row width is 38 inches, the maximum width of the spray hood should be 30 inches.
5. Maximum tractor speed: 5 mph.
7. Use low-drift nozzles.

Crop injury may occur when the foliage of treated weeds comes into direct contact with leaves of the crop. Do not apply this product where the leaves of the crop are growing in direct contact with weeds to be treated. Droplets, mist, foam or splatter of the herbicide solution may contact the crop and cause discoloration, spotting or destruction.

PRECAUTIONS, RESTRICTIONS: Contact of this product in any manner to any vegetation to which treatment is not intended may cause damage. Such damage shall be the sole responsibility of the applicator. Do not spray too far from the field boundary or license following applications of this product through hooded sprayers. Do not apply more than 3 quarters of this product per acre per year for hooded sprayer applications.

PRE-SHREAST

USE INSTRUCTIONS: Make applications at 35 percent grain moisture or less. Ensure that maximum kernel fill is complete and the corn is physiologically mature (blunt layer formed). For recommended applications, apply up to 3 quarters of this product per acre. For sequential applications, apply up to 1 quart of this product per acre.

PRECAUTIONS, RESTRICTIONS: Do not treat corn grown for seed because a reduction in germination or vigor may occur. Allow a minimum of 7 days between application and harvest.

POST-HARVEST

USE INSTRUCTIONS: This product may be applied after harvest of corn. Higher rates may be required for control of large weeds which were growing in the crop at the time of harvest. Tank mixtures with 2,4-D or dicamba may be used.

PRECAUTIONS, RESTRICTIONS: Do not harvest or feed treated vegetation for 8 weeks following application.

COTTON

TYPES OF APPLICATIONS: Preplant, preemergence, al-planting, hooded sprayer, selective equipment, spot treatment, preharvest

PREPLANT, PREEMERGENCE, AND AL-PLANTING

USE INSTRUCTIONS: This product may be applied before, during or after planting cotton. Applications must be made prior to emergence of the crop.

HOODED SPRAYER, DETECTIVE EQUIPMENT

USE INSTRUCTIONS: This product may be applied through hooded sprayers, recirulating sprayers, shielded applicators or wiper applicators in cotton. Allow at least 7 days between application and harvest.

PRECAUTIONS, RESTRICTIONS: See the "SELECTIVE EQUIPMENT" part of the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label for information on proper use and calibration of this equipment.

SPOT TREATMENT

USE INSTRUCTIONS: For spot treatments, apply this product prior to boll opening of cotton.

PRECAUTIONS, RESTRICTIONS: Do not treat more than 10 percent of the total field area to be harvested. The crop receiving spray in the treated area will be killed. Take care to avoid drift or spray outside target areas for the same reason.

PRESHREAST

USE INSTRUCTIONS: This product provides weed control and cotton regrowth inhibition when applied prior to harvest of cotton. For weed control, apply at rates given in the annual, perennials and woody brush tables. Apply 1 pint to 2 quarts of this product per acre for cotton regrowth inhibition. Allow a minimum of 7 days between application and harvest of cotton.

This product may be applied using either aerial or ground spray equipment. For ground applications, apply this product in 10 to 20 gallons of water per acre. For aerial applications, apply this product in 3 to 10 gallons of water per acre.

Apply after sufficient hulls have developed to produce the desired yield of cotton. Applications made prior to this time could affect maximum yield potential.

This product may be tank mixed with DEP®, Flex® or Frey™ to provide additional enhancement of cotton leaf drop.

PRECAUTIONS, RESTRICTIONS: Do not feed or graze treated cotton forage or hay following preharvest applications. Do NOT APPLY MORE THAN 1 QUART OF THIS PRODUCT PER ACRE BY AIR. Do not apply more than 3 quarters of this product per acre by ground. Do not apply to cotton grown for seed, as a reduction in germination or vigor may occur.

FALLOW SYSTEMS

TYPES OF APPLICATIONS: Chemical fallow, preplant fallow beds, advice.

Chemical Fallow

USE INSTRUCTIONS: This product may be applied during the fall period prior to planting or emergence of any crop listed on this label. For any crop not listed on this label, applications must be made at least 30 days prior to planting. This product may be used as a substitute for tillage to control annual weeds in fallow fields. Also, broadcast or spot treatments will control or suppress many perennial weeds in fallow fields. Ground or aerial application equipment may be used. Tank mixtures with 2,4-D and dicamba may be used.

PRECAUTIONS, RESTRICTIONS: DO NOT APPLY DICAMBA TANK MIXTURES BY AIR IN CALIFORNIA.

Refer to the specific product labels for crop rotation restrictions and cautionary statements of all products used in tank mixtures. Some crop injury may occur if Barate™ is applied within 45 days of planting.

PREPLANT FALLOW BEDS

USE INSTRUCTIONS: This product may be applied to fallow beds prior to planting or emergence of any crop listed on this label. For any crop not listed on this label, applications must be made at least 30 days prior to planting. This product will control weeds listed in the annual, perennial and woody brush tables.

In addition, 12 fluid ounces of this product plus 2 to 3 oz of Go® 20XL per acre will control the following weeds with the maximum height or length indicated: 3" - common cheeseweed, chickweed, groundsel 6" - London rocket, shepherd's purse.

16 fluid ounces of this product plus 2 to 3 oz of Go® 20XL per acre will control the following weeds with the maximum height or length indicated: 6" - common cheeseweed, groundsel, messina (Coronella arenaria), 12" - chickweed, London rocket, shepherd's purse.

ADJUDICATE

USE INSTRUCTIONS: This product may be used in conjunction with tillage practices in fallow systems or preplant to labeled crops to control downy brome, cheat, volunteer wheat, tussock mustard and foxtail. Apply 6 fluid ounces of this product in 3 to 10 gallons of water per acre. Make applications after weeds are 6 inches in height. Applications must be followed by conventional tillage practices no later than 15 days after treatment and before regrowth occurs. Allow at least 1 day after application before tillage.

PRECAUTIONS, RESTRICTIONS: Tank mixtures with residual herbicides may result in reduced performance.

GRAIN SORGHUM (Milo)

TYPES OF APPLICATIONS: Preplant, preemergence, al-planting, spot treatment, wiper applications, preharvest, post-harvest

PREPLANT, PREEMERGENCE, AND AL-PLANTING

USE INSTRUCTIONS: This product may be applied before, during or after planting grain sorghum. Applications must be made prior to emergence of the crop.

SPOT TREATMENT AND WIPER APPLICATIONS

USE INSTRUCTIONS: This product may be applied as a spot treatment in grain sorghum. Make spot treatments before heading of milo. This product may be applied with wiper applicators to control or suppress the weeds listed under "WIPER APPLICATIONS" in the "SELECTIVE EQUIPMENT" section of this label.
**GLYPHOSATE 4 PLUS**

**Precautions, Restrictions:** For spot treatment, do not treat more than 10 percent of the total field area to be harvested. The crop receiving spray in treated area will be killed. Take care to avoid drift or spray outside the treated area for this reason.

**Peanuts**

*Use Instructions:* This product may be applied as a preplant or preemergence broadcast application or as a wiper application for crops listed in this section. Directed sprays may be applied to any crop except corn. For orchards or vineyards, mix 1 gallon of this product in 4 gallons of water to prepare a 25 percent solution. In severe infestations, reduce equipment ground speed to ensure that adequate amounts of this product are applied to the weeds. A second treatment in the opposite direction may be beneficial.

For improved bermswood, this product may be tank-mixed with 2,4-D or 2,4,5-DB. See the 2,4-D label for intervals between application and planting.

**Preharvest**

*Use Instructions:* For spot treatments, apply this product prior to initial pod set in soybeans.

**Pecans**

*Types of Applications:* Preplant, preemergence, at-planting

**Preharvest**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Prairie Grasses and Sedges**

*Use Instructions:* This product may be applied prior to planting or emergence of perennial grasses and sedges. Additional treatments may be applied at 30- to 45-day intervals, as needed, to control these weeds.

**Prairie Weeds**

*Use Instructions:* This product may be applied prior to planting or emergence of perennial weeds. Additional treatments may be applied at 30- to 45-day intervals, as needed, to control these weeds.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preharvest**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Presion, Preemergence and Post-emergence**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplant, Preemergence and Post-emergence**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplant, Post-emergence**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplant, Preemergence and Post-emergence**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.

**Preplanting**

*Use Instructions:* This product may be applied prior to planting or emergence of forage grasses and legumes. In addition, this product may be used to control perennial pasture species listed on this label prior to re-planting.
GLYPHOSATE 4 PLUS

Apply after pods have set and lost all green color. Allow a minimum of 7 days between application and harvest of soybeans. Care should be taken to avoid excessive seed shatter loss due to ground application equipment.

PRECAUTIONS, RESTRICTIONS: Do not graze or harvest treated crop for livestock feed within 25 days of last preharvest application. DO NOT APPLY MORE THAN 6 QUARTS PER ACRE OF THIS PRODUCT FOR PREHARVEST APPLICATIONS. DO NOT APPLY MORE THAN 1 QUART PER ACRE OF THIS PRODUCT BY AIR. Do not apply to soybeans grown for seed as a reduction in germination or vigor may occur.

Selective equipment

USE INSTRUCTIONS: This product may be applied through nozzling sprayers, shielded applicators, hopped sprayers, wiper applicators or sponge bars in soybeans. Allow at least 7 days between application and harvest.

PRECAUTIONS, RESTRICTIONS: See the "SELECTIVE EQUIPMENT" part of the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label for information on proper use and calibration of this equipment.

Sugarcane

TYPES OF APPLICATIONS: Preplant, preemergence, spot treatment, yellow, hooded sprayers

Preplant, Preemergence

USE INSTRUCTIONS: This product may be applied in or around sugarcane fields or in fields prior to the emergence of plant cane.

PRECAUTIONS, RESTRICTIONS: Do not apply to vegetation in or around ditches, canals or ponds containing water to be used for irrigation.

Spot Treatment

USE INSTRUCTIONS: This product may be applied as a spot treatment in sugarcane. For control of volunteer or diseased sugarcane, make a 1 percent solution of this product in water and spray in or around sugarcane to be controlled. Volunteer or diseased sugarcane should have at least 7 new leaves.

PRECAUTIONS, RESTRICTIONS: Avoid spray contact with healthy cane plants since severe damage or destruction may result. Do not feed or graze treated sugarcane foliage following application.

Fellow treatments

USE INSTRUCTIONS: This product may be used as a replacement for fertilizer in fields that are cropped to sugarcane crops. This product may also be used to remove the last stubble of rice cane. For removal of last stubble of rice cane, apply 4 to 5 quarts of this product in 10 to 40 gallons of water per acre to new growth having at least 7 new leaves. Allow 7 or more days after application before tillage.

Hooded sprayers

USE INSTRUCTIONS: This product may be used through hooded sprayers for weed control between the rows of sugarcane. A hooded sprayer is a type of shielded applicator. The spray pattern is completely enclosed on the top and all 4 sides by a hood, thereby shielding the crop from the spray solution.

Minimize the potential for spray particles to escape from under the hood by operating the sprayer at appropriate ground speeds, nozzle pressures and wind speeds. Operation on rough or sloping ground may result in spray particles escaping from the hood.

When applying to sugarcane that is grown on raised beds, ensure that the hood is designed to completely enclose the spray. If necessary, extend the front and rear flaps of the hood so the gaps between the rows.

Equipment must be designed, maintained and operated to prevent the herbicide solution from contacting the crop. Contact of this product in any manner to any vegetation to which treatment is not intended may cause damage. Such damage shall be the sole responsibility of the applicator.

PRECAUTIONS, RESTRICTIONS: Do not allow treated weeds to come in contact with the crop. Droplets, mist, foam or splatter of the herbicide solution coming in contact with the crop may result in discoloration, stunting or destruction.

Sunflowers

TYPES OF APPLICATIONS: Preplant, preemergence

USE INSTRUCTIONS: This product may be applied before, during or after planting sunflowers. Applications must be made prior to emergence of the crop.

PRECAUTIONS, RESTRICTIONS: Do not apply more than 1 quart of this product per acre to sunflowers. Make only one preplant or preemergent application per year. Do not feed or graze sunflower foliage following application of this product.

Tree, Nut and Vine (General)

TYPES OF APPLICATIONS: Weed control, middles (between rows of trees), strips (in row of trees), selective equipment (except live), perennial grass suppression

NOTE: THIS SECTION GIVES DIRECTIONS THAT APPLY TO ALL CITRUS CROPS, TREE FRUITS, TREE NUTS AND VINE CROPS. SEE THE INDIVIDUAL CROP SECTIONS FOR INSTRUCTIONS, PREHARVEST INTERVALS, PRECAUTIONS AND RESTRICTIONS FOR SPECIFIC CROPS.

This product may be applied in middles, strips and for weed control in established citrus groves, fruit and nut orchards, and vineyards. Apply at 1 pint to 3 quarts per acre. Repeat applications may be made up to a maximum of 10.8 quarts per acre per year. This product may also be used for site preparation prior to transplanting these crops. Allow a minimum of 6 days between application and transplanting. Applications may be made with boom equipment, CDA shielded sprayers, hand-held and high-volume wands, lances, orchard guns or with wiper applicator equipment, except as directed.

Middle (between rows)

USE INSTRUCTIONS: This product will control or suppress annual and perennial weeds and ground covers growing between the rows of labeled tree and vine crops. If weeds are under drought stress, irrigate prior to application. Reduced control may result if weeds have been mowed prior to application.

A tank mixture of this product plus Garlo® 2XL may be used for annual weeds in middles between rows of citrus crops, tree fruits, tree nuts and vine crops. Use this mixture when weeds are stressed or growing in dense populations. 16 to 32 oz of this product plus 3 to 12 oz of Garlo® 2XL will control annual weeds with a minimum height or diameter of 6 inches, including crabgrass, hairy fleabane (Conyza bonariensis), common groundsel, largeflowered dandelion, largeflowered dandelion, common lambsquarters, redroot pigweed, Leland rice, common ragweed, shatterbox, annual sowthistle, common cheeseweed (malva), flame (suppression), horseweed/creeping dock (Conyza canadensis), stingling nettle and common purslane (suppression). 12 to 32 oz of this product plus 1 to 6 oz of Garlo® 2XL will control common cheeseweed (malva) with a maximum height or diameter of 9 inches.

Stripes (in rows)

USE INSTRUCTIONS: This product may be applied in rows of tree or vine crops and may also be tank mixed with the following products.

DEV-B30 DF
DEV-K40 DF
GEOLE 60 RL
GEOLE 40 RL
KAREM 50 DF
KORUM 60 DF
KIPRAK 60 DF
PROWEL* 50 DF
SOLISANT 50 DF
SULFAN 50 DF
SURFLAN 75 W

Do not apply these tank mixtures in Puerto Rico.

Refer to the individual product labels for specific crop, rates, geographic restrictions and precautionary statements.

Applies 1 to 5 quarts of this product per acre in these tank mixtures. Use rates at the higher end of the specified rate range when weeds are stressed, growing in dense populations or are greater than 12 inches tall.

Perennial grass suppression

This product will suppress perennial grasses such as bahiagrass, Bermuda grass, tall fescue, orchardgrass, Kentucky bluegrass, and quackgrass that are grown as ground covers in tree and vine crops.

For suppression of tall fescue, orchardgrass and quackgrass, apply 5 fluid ounces of this product in 10 to 20 gallons of water per acre.

For suppression of Kentucky bluegrass covers, apply 6 fluid ounces of this product per acre. Do not add ammonium sulfate.

For best results, use cold season grass covers in the spring to even their height and apply this product 3 to 4 days after mowing.

For suppression of vegetative growth and seedhead inhibition of bahiagrass for approximately 45 days, apply 8 fluid ounces of this product in 10 to 25 gallons of water per acre. Apply 1 to 2 weeks after full green-up or after mowing to a uniform height of 5 to 6 inches. This application must be made prior to seedhead emergence.

For suppression up to 120 days, apply 4 fluid ounces of this product per acre, followed by an application of 2 to 4 fluid ounces per acre about 45 days later. Make no more than 2 applications per year.

For burnout of bermudagrass, apply 1 to 2 quarts of this product in 9 to 20 gallons of water per acre. Use this treatment if a reduction of the bermudagrass stand can be tolerated. When burnout is required prior to harvest, allow at least 31 days to ensure sufficient time for burnout to occur.

For suppression of bermudagrass, apply 6 to 16 fluid ounces of this product per acre east of the Rocky Mountains and 16 to 50 fluid ounces of this product per acre west of the Rocky Mountains. Apply in one total spray volume of 15 to 20 gallons per acre, no sooner than 1 to 2 weeks after full green-up. If the bermudagrass is moved prior to application, maintain a minimum of 8 inches in height. Sequential applications may be made when regrowth occurs and bermudagrass injury and stand reduction can be tolerated. Size of the rocky
Mountains, rates of 6 to 10 field ounces per acre should be used in shaded conditions or when a lower degree of suppression is desired.

Selective equipment

Shaped and wiper applications may be used in tree crops and grapes. Refer to the individual crop sections for time interval between application and harvest.

PRECAUTIONS/RESTRICTIONS: For all uses in this section.

EXTREME CARE MUST BE EXERCISED TO AVOID CONTACT OF HERBICIDE SOLUTION, SPRAY, DUST OR MIST WITH FOLIAGE OR GREEN BANK OF TRUNK, BRANCHES, SUCKERS, FRUIT OR OTHER PARTS OF TREES AND VINES. CONTACT OF THIS PRODUCT WITH OTHER THAN MATURED BROWN BANK CAN RESULT IN SERIOUS DAVAGE. AVOID WAKING OF CUT STUMPS WITH THIS PRODUCT AS INJURY RESULTING FROM ROOT GRAFTING MAY OCCUR IN ADJACENT TREES.

Tree Fruits

LABELED CROPS: Apples, Apricot, Cherry (Sweet, Sour), Crabapple, Loquat, Mayhaw, Nectarine, Olive, Pear, Plum/Peach (All), Quince

TYPES OF APPLICATIONS: Weed control, middles (between rows of trees), strips (in row of trees), selective equipment

NOTE: FOR USE DIRECTIONS, SEE THE "TREE, NUT AND VINE (GENERAL)" SECTION. THE FOLLOWING DIRECTIONS ARE SPECIFIC TO TREE FRUITS.

Restrictions on application equipment

For cherries, any application equipment listed in this section may be used in all states.

For cherry and olives, apply as a post-directed spray only.

Any application equipment listed in this section may be used in apricots, nectarines, peaches and plums/prunes grown in Arizona, California, Colorado, Idaho, Kansas, Kentucky, New Jersey, North Dakota, Oklahoma, Oregon, Texas, Utah and Washington, except for peaches grown in the states specified in the following paragraph. In all other states use wiper equipment only.

For PEACHES grown in Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina and Tennessee only, apply with a shielded boom sprayer or shielded wiper applicator, which prevents any contact of this product with the foliage or bark of trees. Apply no later than 90 days after first bloom. Applications made after this time may result in severe damage. Remove suckers and low-hanging limbs at least 10 days prior to application. Avoid applications near trees with recent pruning wounds or other mechanical injury. Apply only near trees which have been planted in the orchard for 2 or more years. EXTREME CARE MUST BE TAKEN TO ENSURE NO PART OF THE TREE IS CONTACTED.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 1 day between last application and harvest for apple, cherry, nectarine, olive, peach, plum/prune.

Tree Nuts

LABELED CROPS: Almond, Beechnut, Brazil nut, Butternut, Cashew, Chestnut, Chinenpik, F. (Hezelnuts), Hickory nut, Macadamia, Pecan, Pecancho, Walnut (Black, English)

TYPES OF APPLICATIONS: Weed control, middles (between rows of trees), strips (in row of trees), selective equipment

NOTE: FOR USE DIRECTIONS, SEE THE "TREE, NUT AND VINE (GENERAL)" SECTION. THE FOLLOWING DIRECTIONS ARE SPECIFIC TO TREE NUTS.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 3 days between last application and harvest of tree nuts.

Tropical Crops

LABELED CROPS: Ateano, Avocado, Banana, Barbados Cherry (accl.), Breadfruit, Canistel, Carambola, Cherimoya, Cocoa beans, Coconuts, Coffee, Dates, Figs, Guava, Jaboticaba, Jujube, Longan, Lychee, Mango, Murmulus (phen.), Papaya, Passion fruit, Persimmon, Pineapple, Plantain, Pomegranate, Sapodilla, Sapote (black, mamey, white), Soursop, Sugar apple, Tamarind, Tea

USE INSTRUCTIONS: This product may be applied for weed control or for site preparation prior to transplanting crops listed in this section. In coffee and banana, delay applications 3 months after transplanting to allow the new coffee or banana plant to become established.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 14 days between last application and harvest of acerola, akeero, avocado, breadfruit, canistel, carambola, cherimoya, cocoa beans, coconuts, dates, figs, goose, jaboticaba, jujube, longan, lychee, mango, mayhero, passion fruit, persimmon, pomegranate, sapodilla, sapote, soursop, sugar apple, tamarind, and tea.

Allow a minimum of 28 days between last application and harvest of plantain and coffee.

Allow a minimum of 1 day between last application and harvest of banana, guava, and papaya.

For direct application to bananas (bananacide), remove fruit prior to treatment.

Do not feed or graze treated pineapple forage following application.

For all crops grown in areas where treated hay or forage is used for livestock feed, allow a minimum of 30 days prior to backgrounding or grazing.

Vine Crops

LABELED CROPS: Grapes (rain, table wine), Kiwi fruit

TYPES OF APPLICATIONS: Weed control, middles (between rows), strips (in row), selective equipment

NOTE: FOR USE DIRECTIONS, SEE THE "TREE, NUT AND VINE (GENERAL)" SECTION. THE FOLLOWING DIRECTIONS ARE SPECIFIC TO VINE CROPS.

Applications should not be made when green shoots, canes or foliage are in the spray zone.

In the northeastern and Great Lakes regions, applications must be made prior to the end of bloom stage of grapes to avoid injury, or make applications with shielded sprayers or wiper equipment.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 14 days between last application and harvest.

Roundup Ready® Crops

Soybeans with the Roundup Ready® Gene

ALLIAGE, LLC RECOMMENDS USE OF THIS PRODUCT FOR POSTEMERGE APPLICATION ONLY ON SOYBEAN VARIETIES DESIGNATED AS CONTAINING THE ROUNDUP® READY® GENE.

• Applying this product to soybean varieties which are not designated as Roundup Ready® will result in severe crop injury and yield loss. Avoid contact with foliage, green stems, or fruit of crops, or any desolate plants which do not contain the Roundup Ready® gene, since severe injury or destruction will result.

• Roundup Ready® varieties must be purchased from an authorized seed supplier. Crop safety and weed control performance are not warranted by Alliage, LLC when this product is used in conjunction with "brown bag" or "bin run" soybean seed saved from previous year's production and replanted.

• The Roundup Ready® designation indicates that the soybean contains a patented gene which provides tolerance to Alliage's Glyphosate based herbicides. Information on Roundup Ready® soybeans may be obtained from your seed supplier.

NOTE: *The use of this product for in-crop applications over Roundup Ready® soybeans is not registered in California.

Application Instructions

This product may be applied postemergence to Roundup Ready® soybeans from the emergence stage throughout flowering.

Allow a minimum of 14 days between application and harvest of soybeans.
Maximum Allowable Yearly Rates

Preplant: Maximum amount of this product which can be applied prior to crop emergence is 5 quarts/A.

In-crop: Maximum combined total of multiple in-crop applications from cranking throughout the season is 9 quarts/A. The maximum rate for any single in-crop application is 2 quarts/A. The maximum combined total of this product which can be applied during flowering is 2 quarts/A.

Preharvest: Maximum amount of this product that can be applied after loss of green color in soybean pods until 14 days before harvest is 1 quart/A. The combined total of in-crop and preharvest Glyphosate 4 Plus applications may not exceed 3 quarts/A.

Crop Stage: Combined total per year for all applications may not exceed 8 quarts/A.

When applied as directed, this product will control labeled annual grasses and broadleaf weeds in Roundup Ready soybeans. Many perennial grasses and broadleaf weeds will be controlled or suppressed with one or more applications of this product.

There are no rotational crop restrictions following applications of this product.

For ground applications: Use the specified rates of this product in 5 to 20 gallons of spray solution per acre as a broadcast spray. Carefully select proper nozzle and spray pressure to avoid spraying a fine mist. For best results with ground application equipment, use nozzles which produce a flat fan pattern. Check for even distribution of spray droplets.

For aerial applications: Use the specified rates of this product in 3 to 15 gallons of spray solution per acre. Do not exceed 1 quart of this product per acre. DO NOT APPLY DURING LOW LEVEL INVERSION CONDITIONS. WHEN WINDS ARE GUSTY OR UNDER ANY OTHER CONDITIONS WHICH FAVOR DRIFT. DRIFT MAY CAUSE DAMAGE TO ANY VEGETATION CONTACTED TO WHICH TREATMENT IS NOT INTENDED. MAINTAIN APPROPRIATE BUFFER ZONES TO PREVENT INJURY TO ADJACENT DESIRABLE VEGETATION.

AERIAL APPLICATIONS ON ROUNDUP READY® SOYBEANS MAY BE MADE ONLY IN THE FOLLOWING STATES: ALABAMA, ARKANSAS, FLORIDA, GEORGIA, KANSAS, LOUISIANA, MISSISSIPPI, MISSOURI (BOOT HEEL ONLY), NORTH CAROLINA, OKLAHOMA, SOUTH CAROLINA, TENNESSEE AND TEXAS.

Annual Weed Rate Tables

The following rate recommendations will provide control of labeled grasses and broadleaf weeds in conventional and no-till soybean production systems. Refer to the "ANNUAL WEEDS RATE TABLES ALPHABETICALLY BY SPECIES" on this label for rate recommendations for specific annual weeds.

Allgaars, LLC will not warrant crop safety or weed control when Roundup Ready® soybeans are treated with herbicides not specified on this label. Because of the potential for 1) crop injury, 2) poor weed control from antagonism, and/or 3) rotational crop restrictions, herbicides not specified on this label should not be used, whether applied pre-emergence or post-emergence as a tank mixture with Glyphosate 4 Plus. This product may be used up to 64 fluid ounces per acre in any single application for control of annual weeds, where heavy weed densities exist. The maximum combined total of this product which can be applied during flowering is 64 fluid ounces per acre.

NOTE: The following recommendations are based on a clean start at planting by using a burn down application or tillage to control existing weeds before crop emergence. In no-till and stale seeded situations, a preplant burn-down treatment of 18-64 fluid ounces per acre of this product can be used to control existing weeds prior to crop emergence.

Midwest/Mid-Atlantic Directions

Narrow row or drilled soybeans: A single in-crop application of this product will provide effective control of labeled weeds. For best results, use an initial application of 32 fluid ounces per acre (fl oz/A) on 4'-8' rows. Weeds will generally be 4" tall 3 to 5 weeks after planting. If the initial application is delayed and weeds are 8-18" tall, use 48 fl oz/A for best results.

Under adverse growing conditions such as drought, hail, wind damage or a poor soybean stand that slows or delays canopy closure, a sequential application of this product at 10 to 22 fluid ounces per acre may be necessary to control late flushes of weeds. The combined total application in-crop must not exceed 64 fluid ounces per acre.

Wide row soybeans: An in-crop application of this product will provide effective control of the initial stand of labeled weeds. For best results, apply an initial application of 32 fluid ounces per acre (fl oz/A) on 4'-8' rows. Weeds will generally be 4" tall 3 to 5 weeks after planting. If new flushes of weeds occur, they can be controlled by sequential applications of this product.

Initial Treatment

</table>

*Combined total application in-crop not to exceed 96 fluid ounces per acre.

Giant ragweed: Apply 32 fluid oz/A when the weed is 8-12" tall to avoid the need for sequential application.

Groundcherry, lyrethrum, Pennsylvania smartweed and morning glory: Apply 32 fl oz/A to weeds 3'-4" tall.

Some weeds, such as black nightshade, woolly cupgrass, shepherd's purse, wild portulaca, butterbur, and giant ragweed, with multiple germination times may require a sequential application of this product. Suppressed or stunted weeds may also require sequential applications. Sequential applications should be made after some regrowth has occurred. Use a minimum of 16 fluid ounces of this product per acre for sequential applications. The combined total of all in-crop postemergence treatments must not exceed 96 fluid ounces per acre.

Southeast Directions

Narrow row, drilled, or wide-row soybeans: An in-crop application of this product will provide effective control of the initial stand of labeled weeds. For best results, apply an initial application of 32 fluid ounces per acre (fl oz/A) on 4'-8' rows. Weeds will generally be 3'-4" tall 2 to 3 weeks after planting.

<table>

*Combined total application in-crop not to exceed 96 fluid ounces per acre.

Florida pyrethrum, hemp sesbania and spurred anoda: Apply 32 fl oz/A to weeds 2'-4" for the initial application. Apply 32 fl oz/A when those weeds are 3'-4" tall if a sequential application is necessary.

Morning glory, black nightshade, groundcherry, and Pennsylvania smartweed: Apply 24 fl oz/A on 1'-3" weeds, 32 fl oz/A on 3'-6" weeds, or 48 fl oz/A on 8'-12" weeds for the initial application.

Some weeds, such as black nightshade, broadleaf signalgrass, Texas parsnip, burcumber, and sida/cockle, with multiple germination times may require a sequential application of this product. Suppressed or stunted weeds may also require sequential applications. Sequential applications should be made after some regrowth has occurred. Use a minimum of 16 fluid ounces of this product per acre for sequential applications. The combined total of all in-crop postemergence treatments must not exceed 96 fluid ounces per acre.

Delta/Mid-South Directions

Narrow row, drilled, or wide-row soybeans: An in-crop application of this product will provide effective control of the initial stand of labeled weeds. A sequential application will be required to control new flushes of weeds. For best results, apply an initial application of 32 fluid ounces per acre (fl oz/A) on 2'-4" weeds. Weeds will generally be 2'-4" tall 2 to 3 weeks after planting.

</tbody>
</table>

*Combined total application in-crop not to exceed 96 fluid ounces per acre.

Hemp sesbania and spurred anoda: Apply a sequential treatment of 32 fl oz/A at 3'-6" tall weeds if necessary.

Some weeds, such as black nightshade, broadleaf signalgrass, Texas parsnip, burcumber, and sida/cockle, with multiple germination times may require a sequential application of this product. Suppressed or stunted weeds may also require sequential applications. Sequential applications should be made after some regrowth has occurred. Use a minimum of 16 fluid ounces of this product per acre for sequential applications. The combined total of all in-crop postemergence treatments must not exceed 96 fluid ounces per acre.

Perennial Weeds Rate Directions

A 32 to 64 fluid ounces per acre rate (single or multiple applications) of this product will control or suppress perennial weeds such as: bermsudgrass, Canada thistle, common...
Glyphosate 4 Plus

Specimen Label

made from the fifth leaf through byleaf. Sequential in-crop applications of this product must be at least 10 days apart and cotton must have at least two nodes of incremental growth between applications.

Salvage Treatment: This treatment may be used after the four leaf stage of development and should only be used when weeds threaten to cease the loss of the crop. One quart per acre may be applied either as an over-the-top application or as a post-directed treatment sprayed higher on the cotton plants and over the weeds. NOTE: SAUSAGE TREATMENTS WILL RESULT IN SIGNIFICANT BOLL LOSS, DELAYED MATURITY AND/OR YIELD LOSS, NO MORE THAN ONE SAUSAGE TREATMENT SHOULD BE USED PER GROWING SEASON.

Weeds controlled: For specific rates of application and instructions for control of various annual and perennial weeds, refer to the "ANNUAL" and "PERENNIAL" Weed Rate Tables of this label. Glyphosate 4 Plus applied at 1 quart per acre will bumout and suppress the growth of the following perennial weeds and reduce crop competition: yellow and purple nulesedge, diconia johnsonii, common bermudagrass, evilseed nightshade, inopan creeper, and Redriv. Fall preharvest applications may be required for control of these perennial weeds.

Tank mixtures with other herbicides may result in reduced weed control or crop injury and are not recommended for over-the-top applications of this product.

Preharvest applications: This product may be applied for preharvest annual and perennial weed control as a broadcast non-selective POST herbicide or for control of 2-leaf cotton after 20% boll open. Allow a minimum of 7 days between application and harvest. For specific recommendations refer to the "COTTON" section on this label.

Note: Glyphosate 4 Plus will not enhance the performance of harvest aids when applied to Roundup Ready cotton. DO NOT APPLY Glyphosate 4 Plus TO COTTON GROWN FOR SEED.

Roundup Ready Flex Cotton

The instructions provided in this section are specific to, and may only be used with, varieties designated as Roundup Ready Flex cotton. Applications described in this section on other than Roundup Ready Flex cotton will cause crop injury and reduced yields. DO NOT combine the instructions in this label with those in the "Roundup Ready Cotton" section of this label, or with any other Roundup Ready cotton or Roundup Ready Flex cotton Instruction booklets. Ensure specific product being used is labeled for application prior to planting or the emergence of cotton. Read and follow label directions of all products in the tank mixture.

camazone, dilon, flumioxazin, fluorometin, fomesafen, metolachlor, s-metolachlor, pendimethalin, prometryn, pyrimbromoxid

Cepedal, Cotton Plus Command, Cottonon, Diron, Diron, Dkarm, Paralox, Penbis PCS Dual Magnum, Dual II Magnum, Provi, Provi, HCD, Ryax, Rytrax, Staple, Vopat, Zorab

PRECAUTIONS, RESTRICTIONS: Maximum quantity of this product that may be applied for all plants, at planting and preemergence applications combined is 5 quarts per acre per season. Refer to individual tank-mix product label for restrictions and precautions; use according to the most restrictive preemergence statements for each product in the tank mixture.

USE INSTRUCTIONS: This product may be applied before, during or after planting Roundup Ready Flex cotton.

TANK MIXTURES: This product may be tank-mixed with 2,4-D or Clarity and applied prior to planting only. This product may be tank-mixed with the following products and applied prior to planting: Ensure that the specific product being used is labeled for application prior to planting or the emergence of cotton. Read and follow label directions of all products in the tank mixture.
USE INSTRUCTIONS: This product may be applied to control annual grasses and broadleaf weeds listed on this label in Roundup Ready Flex Cotton. To maximize yield potential, eliminate competing weeds early. Many perennial weeds will be controlled or suppressed with one or more applications of this product. Use an initial application of 1 quart per acre to control or suppress 1 to 3 inch tall annual grasses and broadleaf weeds. This product may be applied postemergence to Roundup Ready Flex cotton using ground application equipment at rates up to 1.8 quarts per acre per application. In addition to broadcast application, post-directed spray equipment may be used to achieve more thorough weed control.

TANK MIXTURES: This product may be tank-mixed with the following products and applied postemergence (in-crop) over the top of Roundup Ready Flex cotton. Ensure that the specific product being used is labeled for application postemergence (in-crop) to cotton. Read and follow label directions of all products in the tank mixture.

PRECAUTIONS, RESTRICTIONS: The maximum single, in-crop application rate of this product to Roundup Ready Flex cotton using ground application equipment is 1.8 quarts per acre. In-crop application rates above 1 quart per acre made alone or with the addition of other crop protectant containing surfactant may cause a crop response including leaf speckling or leaf necrosis. Do not exceed a maximum rate of 1 quart per acre when making application by air. Between lazy and 60 percent open bolls, the maximum combined total application rate of this product is 2 quarts per acre. The maximum combined total of all applications of this product made from crop emergence to 60 percent open bolls must not exceed 0.6 quarts per acre. DO NOT ADD ADDITIONAL SURFACANT OR ADDITIVES CONTAINING SURFACTANT TO THIS PRODUCT FOR OVER-THE-TOP APPLICATION TO ROUNDP READER FLEX COTTON. Refer to individual tank-mix product label for restrictions and precautions; use according to the most restrictive precautionary statements for each product in the tank mixture.

PREHARVEST USE INSTRUCTIONS: This product may be applied to Roundup Ready Flex cotton up to 2 quarts per acre for annual and perennial weed control prior to harvest after 60 percent boll color.

NOTE: This product will not enhance the performance of harvest aids when applied to Roundup Ready Flex cotton.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 7 days between application and harvest of Roundup Ready Flex cotton. DO NOT ADD ADDITIONAL SURFACTANT OR ADDITIVES CONTAINING SURFACTANT TO THIS PRODUCT FOR PREHARVEST APPLICATION TO ROUNDP READER FLEX COTTON.

ATTENTION: USE OF THIS PRODUCT IN ACCORDANCE WITH LABEL DIRECTIONS IS EXPECTED TO RESULT IN NORMAL GROWTH OF ROUNDUP READER FLEX COTTON. HOWEVER, DUE TO THE SENSITIVITY OF COTTON FRUITING TO VARIOUS ENVIRONMENTAL CONDITIONS, AGRONOMIC PRACTICES AND OTHER FACTORS IT IS IMPOSSIBLE TO GUARANTEE ALL REQUIRING ASSOCIATED WITH THIS PRODUCT. EVEN WHEN APPLICATIONS ARE MADE IN CONFORMITY WITH THE LABEL SPECIFICATIONS. IN SOME CASES, THESE FACTORS CAN RESULT IN SOLL LOSS, DELAYED MATURITY AND/or YIELD LOSS.

Seed Production of Canola with the Roundup Ready® Gene

This product may be used for control of non-Glyphosate tolerant canola. In production fields of canola containing the Roundup Ready® gene, severe injury on death will result if canola varieties which do not contain the Roundup Ready® gene are sprayed with this product.

Roundup Ready™ canola varieties must be purchased from an authorized licensed seed supplier. The designation, "Roundup Ready®", indicates the canola variety contains a patented proprietary trait. It is unlawful to sell or plant saved seed.

Canola with the Roundup Ready® gene may only be used for planting a commercial crop. In a single season, seed may not be replanted or saved and saved may not be supplied to others for replanting. Alliaje, LLC does not warrant the safety or performance of this product when used on "brown bax" or farmer-saved seed.

Use Preemergent and/or Over-the-Top Applications on Canola with the Roundup Ready® Gene

Maximum Allowable Combined Application Quantity Per Season:
1. Preplant and preemergence application:
   2 quarts/A
2. Total in-crop application from emergence to 6-leaf:
   1 quart/A

For annual applications: before planting or emergence of weeds. For best results with ground application equipment use fan flat nozzles. Check for even distribution of spray droplets.

For aerial applications: apply this product in 3 to 15 gallons of water per acre.

DO NOT EXCEED A MAXIMUM RATE OF 18 OUNCES PER ACRE OF THIS PRODUCT WHEN MAKING APPLICATIONS BY AIR. AVOID DRIFT. EXTREME CARE MUST BE USED WHEN APPLYING THIS PRODUCT TO PREVENT INJURY TO DESIRABLE PLANTS AND CROPS WHICH DO NOT CONTAIN THE ROUNDUP READY® GENE. DO NOT APPLY DURING LOW-LEVEL INVERSION CONDITIONS, WHEN WINDS ARE GUSTY OR UNDER ANY OTHER CONDITIONS WHICH FAUOR DRIFT. DRIFT MAY CAUSE DAMAGE TO ANY VEGETATION CONTRACTED TO WHICH TREATMENT IS NOT INTENDED. TO PREVENT INJURY TO ADJACENT DESIRABLE VEGETATION, APPROPRIATE BUFFER ZONES MUST BE MAINTAINED.

Do not allow the herbicide solution to mist, drip, drift or splash onto desirable vegetation during minute quantities of this product can cause severe damage or destruction to the crop, plants or other areas on which treatment was not intended. The likelihood of injury occurring from the use of this product increases when winds are gusty, as wind velocity increases, when wind direction is constantly changing or when there are other meteorological conditions that favor spray drift. When spraying, avoid combinations of pressure and nozzle type that will result in sprayer or drift mist (mist) which are likely to drift. AVOID APPLIYING AT EXCESSIVE SPEED OR PRESSURE.

Coarse sprays are less likely to drift; therefore, do not use nozzles or nozzle configurations which dispense spray as fine spray droplets. Do not angle nozzles forward into the airstream and do not increase spray volume by increasing nozzle pressure.

There are no rotational crop restrictions following applications of this product.
**GlyPhosate 4 Plus**

**Specimen Label**

**Equipment postemergence to Roundup Ready® canola from emergence through the six-leaf stage of development.** To maximize yield potential spray canola early to eliminate competing weeds. Any single over-the-top broadcast application should not exceed 16 ounces per acre. No more than two over-the-top broadcast applications may be made from crop emergence through the six-leaf stage of development. Sequential over-the-top applications of this product must be at least 10 days apart.

**Weeds controlled:** For specific rates of application and instructions for control of various annual and perennial weeds, refer to the "ANNUAL" and "PERENNIAL Weed Rate Tables on this label.

- **Tank mixtures with other herbicides, insecticides, or fungicides may result in reduced weed control or crop injury and are not recommended for over-the-top applications of this product.**

- **Some weeds with multiple germination times or suppressed (planted) weeds may require sequential applications of this product.** The second application should be made after some regrowth has occurred and at least 10 days after a previous application of this product.

**This product will control or suppress most perennial weeds. For some perennial weeds, repeat applications may be required to eliminate crop competition throughout the growing season.**

For over-the-top uses on Roundup Ready® crop varieties, crop safety and weed control performance are not warranted by Allgiers, LLC when this product is used in conjunction with "brown bag" or "bin run" seed saved from previous year’s production and replanted.

**Postemergence Applications to Corn with the Roundup Ready® Gene**

**THIS PRODUCT IS TO BE USED ONLY ON CORN SEED DESIGNATED AS CONTAINING THE ROUNDUP READY® GENE.**

- **Applying this product to corn varieties which are not designated as Roundup Ready® will result in severe crop injury and yield loss. Avoid contact with foliage, green stems, or fruit of crops, or any desirable plants which do not contain the Roundup Ready® gene since severe injury or destruction will result.**

- **Roundup Ready® varieties must be purchased from an authorized seed supplier.** Crop safety and weed control performance are not warranted by Allgiers, LLC when this product is used in conjunction with "brown bag" or "bin run" corn seed saved from previous year’s production and replanted.

- **The Roundup Ready® designation indicates that the corn contains a patented gene which provides tolerance to Allgiers’ Glyphosate brand herbicides. Information on Roundup Ready® corn may be obtained from your seed supplier.**

**Application Instructions**

This product may be applied postemergence to Roundup Ready® corn during the period beginning at corn emergence and continuing throughout the 12-leaf stage or until corn height reaches 30 inches, whichever comes first. Single in-crop applications of this product are not to exceed 1 quart per acre. Sequential in-crop applications of this product should not exceed 4 quarts per acre per growing season. Total Glyphosate 4 Plus use should not exceed 8 quarts per acre per year.

Allow a minimum of 50 days between application of this product and harvest of corn forage and 7 days between application and harvest of corn grain. Allow a minimum of 14 days between in-crop applications of this product. THIS USE OF ADDITIVES FOR IN-CROP APPLICATIONS TO ROUNDUP READY® CORN IS PROHIBITED.

**Maximum Yearly Rates Allowed**

| Total of Preplant/Preemergence (Maximum) | 5 quarts/A |
| Total in-crop applications from emergence to 12-leaf stage or 36 inches | 2 quarts/A |
| Maximum preemergence rate | 1 quart/A |
| Combined total per year for all applications | 8 quarts/A |

When applied as directed, this product controls annual grass and broadleaf weeds in Roundup Ready® corn. Many perennial grasses and broadleaf weeds will be controlled or suppressed with one or more over-the-top applications of this product. Applications should be made to actively growing weeds before they reach the maximum size listed in the "ANNUAL" and "PERENNIAL Weed Rate Tables on this label. Refer to the "MOON" section of this label for proper use instructions.

There are no rotational crop restrictions following applications of this product.

**ATTENTION: AVOID DRIFT. EXTREME CARE MUST BE USED WHEN APPLYING THIS PRODUCT TO PREVENT INJURY TO DESIRABLE PLANTS AND CROPS.**

Do not allow the herbicide solution to mist, drip, drift, or splash onto other desirable vegetation since this product can cause severe damage or destruction to crop plants in non-target areas. The likelihood of plant injury occurring from drift of this product is greatest when winds are gusty or in excess of 5 miles per hour. Even under less windy conditions, avoid conditions which allow spray drift to occur such as combinations of precipitation and nozzle type that will result in fine particles (mist) which are likely to drift. AVOID APPLYING AT EXCESSIVE SPEED OR SPRAY PRESSURE.

For ground applications: Use the specified rates of this product in 5 to 20 gallons of spray solution per acre as a broadcast spray. See "WEEDS CONTROLLED" section below for specific rates. Carefully select proper nozzles and spray pressure to avoid spraying a fine mist. For best results with ground application equipment, use flat fan nozzles. Check for even distribution of spray droplets.

**For aerial applications:** Use the specified rates of this product in 3 to 15 gallons of spray solution per acre. Do not exceed 1 quart per acre. See "WEEDS CONTROLLED" section below. AVOID DRIFT - DO NOT APPLY DURINGINVERSION CONDITIONS, WHEN WINDS ARE GUSTY OR UNDER ANY OTHER CONDITIONS WHICH MAY FAVOR DRIFT. DRIFT MAY CAUSE DAMAGE TO ANY VEGETATION CONTACTED TO WHICH TREATMENT IS NOT INTENDED. TO Minimize Injury to Adjacent Vegetation, APPROPRIATE BUFFER ZONES MUST BE MAINTAINED.

**Weeds controlled**

For specific rates of application and instructions for control of various annual and perennial weeds, refer to the "ANNUAL" and "PERENNIAL Weed Rate Tables on this label. Glyphosate 4 Plus at up to 1 quart per acre will burn down or suppress the growth of the following perennial weeds and reduce crop competition: nutsedge, rhizome johnsongrass, quackgrass, Canada thistle, veleremust muhiy.

Sequential Applications: Some weeds with multiple germination times or suppressed (planted) weeds may require a second application of this product. The second application should be made after some regrowth has occurred.

**Tank mixtures**

A tank mixture of Glyphosate 4 Plus plus Micro-tech® or Parmer® may be used for postemergence and residual control of annual weeds in corn. These tank mixtures may be made during the period beginning at corn emergence and continuing until corn height reaches 5 inches.

A Glyphosate 4 Plus tank mixture with atrazine, Banvett, Clarista, Perm® or 2,4-D may be used for postemergence control of additional annual weed in corn. A Glyphosate 4 Plus tank mixture with atrazine may be made during the period beginning at corn emergence and continuing until corn height reaches 12 inches. A Glyphosate 4 Plus tank mixture with Banvett or Clarista® at 0.125 to 0.25 b per acre may be made during the period beginning at corn emergence and continuing until corn height reaches 12 inches. A Glyphosate 4 Plus tank mixture with Perm® may be made during the period beginning at corn emergence and continuing until corn height reaches 90 inches. A Glyphosate 4 Plus tank mixture with 2,4-D at 0.125 to 0.25 b per acre may be made during the period beginning at corn emergence and continuing until corn is at the five leaf stage or corn height reaches 8 inches, whichever comes first.

Refer to the specific product label and observe all precautions, mixing and application instructions for all products used in tank mixtures.

**FOREST SITE PREPARATION**

Use this product for the control or partial control of woody brush, trees and herbsaceous weeds in forestry. This product can also be used for use in preparing or establishing wildlife openings within these sites and maintaining logging roads.

Use this product in site preparation prior to planting any tree species, including Christmas trees and agricultual nursery sites.

</table>

**SPECIAL TO-MIST**

Handgun, backpack, Misting Hawaiian % to 2% by volume Spray-to-mist

**LOW VOLUME DIRECTED SPRAY**

Handgun, backpack, Misting Hawaiian 5% to 10% by volume Partial coverage

For low volume directed spray applications, coverage should be uniform with at least 50 percent of the foliage contacted. Coverage of the top one-half of the plant is important for best results.

Use higher rates of this product within the specified range for control or partial control of woody brush, trees and hard-to-control perennial herbsaceous weeds. For best results, apply to actively growing woody brush and trees after full leaf expansion and before fall color and leaf drop. Increase rates within the specified range for control of perennial herbsaceous weeds any time after emergence and before seedheads, flowers, or berries appear.

Use the lower rates of this product within the specified range for control of annual herbsaceous weeds and actively growing perennial herbsaceous weeds after seedheads, flowers, or berries appear. Apply to the foliage of actively growing annual herbsaceous weeds any time after emergence.

This product has no herbicidal or residual activity in the soil. Where repeat applications are necessary; do not exceed 10.8 quarts of this product per acre per year.

**PARMS TEADS**

**TYPES OF APPLICATIONS:** Nonselective weed control, trim-and-edge, chemical mowing, and stumps, habitat management, rangeland.

Nonselective weed control, Trim-and-edge

USE INSTRUCTIONS: This product may be used to control annual weeds, perennial weeds and woody brush and trees which are found in any form of the farmstead, including buildings foundations, along and in ditches, in dry doctiles and canals, along ditches, farm roads, shelterbelts, prior to landscape plantings and equipment storage areas.
GLYPHOSATE 4 PLUS

This product may be tank mixed with the following products. Refer to these product labels for approved tank mix rates and application rates. For annual weeds, use 1 quart per acre of this product when weeds are less than 6 inches tall and 7.5 quarts per acre when weeds are greater than 6 inches tall. For perennial weeds, apply 2 to 6 quarts per acre in these tank mixes. For tank mixtures with these products through backpack sprayers, groundup seed, and other high-volume spray-to-wet applications, see the "HAND-HELD AND HIGH-VOLUME EQUIPMENT" section of this label for specific rates.

Bene* Strazyme 80W
Duron Surfase 75W
Princep® Caliber 90 Surfase AS
Simazine 2A-D
Simazine 4L

This product plus dicamba tank mixtures may not be applied by air in California.

Chemical Mowing

USE INSTRUCTIONS: This product will suppress perennial grasses listed in this section to serve as a substitute for mowing. Apply this product at a rate of 6 to 8 fluid ounces per acre. Use 8 fluid ounces of this product per acre when treating tall fescue, fine fescue, orchardgrass or quackgrass covers. Use 6 fluid ounces of this product per acre when treating Kentucky bluegrass. Apply treatments in 10 to 20 gallons of spray solution per acre. Chemical mowing applications may be made along farm ditches and other parts of farmsteads.

PRECAUTIONS, RESTRICTIONS: Use only in areas where some temporary injury or discoloration of perennial grasses can be tolerated.

Cut Stumps

TYPES OF APPLICATION: Treating cut stumps in any non-agricultural site listed on this label.

USE INSTRUCTIONS: This product will control regrowth of cut stumps and resprouts of many types of woody brush and tree species, some of which are listed below. Apply this product using suitable equipment to ensure coverage of the entire cambium. Cut trees or rehydrants close to the soil surface. Apply a 50 to 100 percent solution of this product to the freshly cut surface immediately after cutting. Delay in application may result in reduced performance. For best results, applications should be made during periods of active growth and full leaf expansion.

Alder Salt-cedar
Eucrypthus Swamp gum
Metasequoia Tax oak
Oak Willow
Red, giant

PRECAUTIONS, RESTRICTIONS: Do NOT MAKE CUT STUMP APPLICATIONS WHEN THE ROOTS OF DESIRABLE WOODLY BRUSH OR TREES MAY BE GRAFTED TO THE ROOFS OF THE CUT STUMP. INJURY RESULTING FROM ROOT GRAFTING MAY OCCUR IN ADJACENT WOODLY BRUSH OR TREES.

Habitat Management

TYPES OF USES: Habitat restoration and maintenance, wildlife food plots

Habitat restoration and maintenance:

USE INSTRUCTIONS: This product may be used to control exotic and other undesirable vegetation in habitat management areas. Applications can be made to allow recovery of native plant species, prior to planting desirable native species, and for similar broad spectrum vegetation control requirements in habitat management areas. Spot treatments can be made to selectively remove unwanted plants for habitat maintenance and enhancement. The tank mixtures listed in this section of the label may be used for habitat restoration and maintenance.

Wildlife food plots:

USE INSTRUCTIONS: This product may be used as a site preparation treatment to control annual and perennial weeds prior to planting wildlife food plots. Any wildlife food species may be planted after applying this product, or native species may be allowed to reestablish the area. Ifillage is needed to prepare a seedbed, wait 7 days after application before tillage.

Rangelands

TYPES OF APPLICATION: Dormant

USE INSTRUCTIONS: This product will control or suppress many weeds, including downy brome, cheat grass, cereal rye, matthiessen rye and jointed goatgrass in dormant rangeland. Apply 8 to 16 fluid ounces of this product per acre in the early spring when the weeds have greened up, but desirable grasses, such as crested and tall wheatgrass, are still taud dormant. Light discoloration of the desirable grasses may occur, but they will regrow and develop under moist soil conditions as effects of this product wear off.

PRECAUTIONS, RESTRICTIONS: Do not use ammonium sulfate when spraying dormant rangeland grasses with this product. Do not make more than one application per year.

ANNUAL WEEDS RATE TABLES ALPHABETICALLY BY SPECIES

Use water carrier volumes of 3 to 10 gallons per acre for ground applications and 3 to 6 gallons per acre for aerial applications.

Apply to actively growing annual weeds.
Do not tank mix with soil residual herbicides when using these rates unless otherwise specified.
For weeds that have been mowed, grazed or cut, allow regrowth to occur prior to treatment.
For those rates less than 48 fluid ounces per acre, this product may be used up to 48 fluid ounces per acre where heavy weed densities exist.
Refer to this map for location of the regions listed in the annual weed tables below.

</table>

**For control of Downy brome in no-till systems, use 16 fluid ounces per acre.**

#### Annual Weeds - Water Carrier Volumes of 10 to 40 Gallons Per Acre

Apply 1 to 1.5 quarts of this product per acre. Use 1 quart per acre if weeds are less than 6 inches tall and 1.5 quarts per acre if weeds are over 6 inches tall.

These rates will provide control of weeds listed in the annual weed control tables when water carrier volumes are 10 to 40 gallons per acre for ground applications.

#### Annual Weeds - Tank Mixtures of 2,4-D or Banvel®

12 to 16 fluid ounces of this product plus 0.25 pounds a.i. of Banvel® or 0.5 pounds a.i. of 2,4-D per acre will control the following weeds with the maximum height or length indicated: 6" - prickly lettuce, marestail/horseweed (Conyza canadensis), morning glory (Lamium spp.), toadflax (Banvel® only); 12" - cocklebur, lambsquarters, pigweed, Russian thistle.

16 fluid ounces of this product plus 0.5 pounds a.i. of 2,4-D per acre will control the following weeds when they are maximum height or length of 6 inches: common ragweed, Pennsylvania sneakweed, and velvetleaf.

12 fluid ounces of this product plus 0.25 pounds a.i. of Banvel® or 0.5 pounds a.i. of 2,4-D per acre will control the following weeds when they are maximum height or length of 12 inches: common ragweed, Pennsylvania sneakweed, and velvetleaf.

Refer to the specific product labels for crop rotation restrictions and cautionary statements of all products used in tank mixtures. Some crop injury may occur if Banvel® is applied within 14 days of planting.

DO NOT APPLY DICAMBA TANK MIXTURES BY AIR IN CALIFORNIA.

### Perennial Weeds Rate Table Alphabetically by Species

Apply to actively growing perennial weeds.

NOTE: If weeds have been moved or lifted, do not treat until plants have resumed active growth and have reached the specified stages. Repeat treatments may be necessary to control weeds regenerating from underground parts or seed. Repeat treatments must be made prior to crop emergence.

Unless otherwise stated, allow 7 or more days after application before tillage.

Do not treat when weeds are under drought stress as good soil moisture is necessary for active growth.

For hand-held sprayers, prepare the desired volume of spray solution by mixing the amount of this product in water as shown in the following table:

</table>

- **Alligatorweed**: Partial control. Apply when most of the plants are in bloom. Repeat applications will be required to maintain control.
- **Arisa (kennel)**: Apply as a spray-to-wet treatment. Optimum results are obtained when plants are at the bud to full bloom stage of growth.
- **Bermaggrass**: Apply when most plants have reached the early head stage.
- **Bermaggrass, water (knotgrass)**: Apply when most plants have reached the early head stage. For suppression in grass-seed production areas. For ground applications only. Ensure entire crown area has resumed growth prior to a fall application. Bermaggrass should have at least 5 inches of growth. Tillage prior to treatment should be avoided. Tillage 7 to 10 days after application produces the best results.
- **Bindweed, field**: For control, apply 5 quarts of this product per acre. For partial control, apply 3 quarts per acre. Treat when bermagragas is actively growing and seedheads are present. Refreshment may be necessary to maintain control.
- **Bermaggrass, water (knotgrass)**: Apply 1.5 quarts of this product in 5 to 10 gallons of water per acre. Apply when water bermaggrass is 12 to 18 inches in length. Allow 7 or more days before tillage, flushing or flooding the fluid.
- **Bindweed, field**: Do not treat when weeds are under drought stress as good soil moisture is necessary for active growth.
- **Bluegrass, Kentucky**: For control, apply 2 quarts of this product per acre. For partial control, apply 1 quart per acre. For ground applications only. Applications should be delayed until maximum emergence has occurred and when weeds are at least 4 inches tall.
- **Bluestem, Idaho**: Apply 4 to 5 quarts of this product per acre. For partial control, apply 3 quarts per acre. Treat when bermagragas is actively growing and seedheads are present. Refreshment may be necessary to maintain control.
- **Brakelwether**: Apply to fully expanded fronds which are at least 18 inches long.
- **Bromegrass, smooth**: For suppression in grass-seed production areas. For partial control, apply 1.5 to 2 quarts of this product in 5 to 10 gallons of water per acre. Apply when plants are at least 5 inches tall.
- **Burges, woolly leaf**: Apply 3 quarts of this product in 10 to 15 gallons of water per acre. For partial control, apply 1 quart per acre. For ground applications only. Applications should be delayed until maximum emergence has occurred and when weeds are at least 4 inches tall.
- **Canegrass, red**: Apply 3 quarts of this product in 10 to 15 gallons of water per acre. For partial control, apply 1 quart per acre. For ground applications only. Applications should be delayed until maximum emergence has occurred and when weeds are at least 5 inches tall.
- **Cattal**: Apply when most plants have reached the early head stage.
- **Clover, red**: Apply when most plants have reached the early bud stage.
- **Cocongrass**: Apply when cocongrass is at least 6 inches tall in late summer or fall. Due to uneven stages of growth and the dense nature of vegetation preventing good spray coverage, repeat treatments may be necessary to maintain control.
- **Dalligrass**: Apply when most plants have reached the early head stage.
- **Dandelion**: Apply when most plants have reached the early bud stage.
- **Dock curly**: Apply when most plants have reached the early bud stage.
- **Dogshene, heme**: For control, apply 2 quarts of this product in 10 to 15 gallons of water per acre. For partial control, apply 1 quart per acre. For ground applications only. Applications should be delayed until maximum emergence has occurred.
- **Fescue (except tall)**: Apply when most plants have reached the early head stage.
- **Fescue, tall**: Apply 3 quarts of this product per acre. For partial control, apply 1 quart per acre. For ground applications only. Applications should be delayed until maximum emergence has occurred.
- **Guineagrass**: Apply when most plants have reached at least the 7-leaf stage of growth. Ensure thorough coverage when using hand-held equipment.
- **Horsenettle**: Apply when most plants have reached the early bud stage.
- **Horsenathes**: Apply when most plants have reached the early bud stage.
- **Iceplant**: Apply when most plants have reached the early bud stage. For best results, apply in late summer or fall. Iceplant should be at or beyond the early bud stage of growth. Thorough coverage is necessary for best control.

</table>

In annual cropping systems, apply 1 to 2 quarts of this product per acre. Apply 1 quart of this product in 3 to 10 gallons of water per acre. Use 2 quarts of this product when applying 10 to 40 gallons of water per acre. For best results, apply when most plants have reached the boot-to-head stage of growth or in the fall prior to frost. Allow 7 or more days after application before tillage. Do not tank mix with residual herbicides when using the 1 quart per acre rate.

For budworm of Johnsongrass, apply 1 pint of this product in 3 to 10 gallons of water per acre below the plants reach a height of 12 inches. For this case, allow at least 3 days after treatment before tillage.

Spot treatment (partial control or suppression) — Apply 1 percent solution of this product when Johnsongrass is 12 to 18 inches tall. Coverage should be uniform and complete.

Spray when most kikuyegrass is at least 8 inches in height (3 to 4-leaf stage of growth). Allow 3 or more days after application before tillage.

Apply at or beyond the joint stage of growth. Use the higher application rate for plants that have reached the woody stage of growth.

Spray when most plants have reached the early bud stage.

Apply when most plants have reached the joint stage of growth.

Apply when most plants have reached the late bud to flower stage of growth.

Use 1 quart of this product in 3 to 10 gallons of water per acre. Use 2 quarts of this product when applying 10 to 40 gallons of water per acre or in pasture sod, or non-agricultural areas. Spray when the wiregrass milt is 8 inches or more in height. Do not till between harvest and fall applications or in the fall or spring prior to spring applications. Allow 3 or more days after application before tillage.

Apply when most plants are in the early bud stage.

Apply when most plants are in the early bud stage.

Applications should be made when at least 60 percent of the plants have berries. Fall treatments must be applied before a killing frost.

Apply 3 quarts of this product per acre or apply a 1 to 2 percent solution for control of nutsedge plants and immature nuts attached to treated plants. Treat when plants are in flower or when new nuts can be found at rizome tips. Nuts which have not germinated will not be controlled and may germinate following treatment. Repeat treatments will be required for long-term control of emerging nutsedge.

Sequential applications: 1 to 3 quarts of this product in 3 to 10 gallons of water per acre will also provide control. Make applications when a majority of the plants are in the 3 to 5-leaf stage (less than 6 inches tall). Repeat this application, as necessary, when newly emerging plants reach the 3 to 5-leaf stage. Sequential applications will be necessary for long-term control.

For partial control of existing plants, apply 1 pint to 2 quarts of this product in 3 to 10 gallons of water per acre. Treat when plants have 3 to 5 leaves and are less than 15 inches tall. Repeat treatments will be required to control subsequent emerging plants or regrowth of existing plants.

Spray 3 quarts of this product in 10 to 40 gallons of water per acre when most plants have reached joint-to-early seedhead stage of development. For partial control in pasture or hay crop renovation, apply 1 to 2 quarts of this product in 3 to 10 gallons of water per acre. For 10 to 40 gallons of water per acre, apply 2 quarts of this product. Do not tank mix with residual herbicides when using the 1 quart rate. Spray when quackgrass is 8 to 15 inches in height. Do not till between harvest and fall applications or in fall or spring prior to spring application. Allow 3 or more days after application before tillage. In pastures or sod, use a moldboard plow for best results.

Apply as a spray-to-wet treatment. Optimum results are obtained when plants are treated at the bud to full-bloom stage of growth.

In annual cropping systems, or in pastures and sods followed by deep tillage. Apply 1 quart of this product in 3 to 10 gallons of water per acre. For 10 to 40 gallons of water per acre, apply 2 quarts of this product. Do not tank mix with residual herbicides when using the 1 quart rate. Spray when quackgrass is 8 to 15 inches in height. Do not till between harvest and fall applications or in fall or spring prior to spring application. Allow 3 or more days after application before tillage. In pastures or sods, use a moldboard plow for best results.

In pastures, sods or non-agricultural areas where deep tillage does not follow application. Apply 2 to 3 quarts of this product in 10 to 40 gallons of water per acre where the quackgrass is greater than 3 inches tall.

For suppression, apply 16 fluid ounces of this product per acre at each of two applications 7 to 14 days apart or a single application of 2 quarts per acre. Apply specified rates in 3 to 10 gallons of water per acre. Apply in late September or early October to plants which are at least 8 inches tall and have been growing 45 to 60 days since the last tillage operation. Make applications at least 1 week before a killing frost.

Best results are obtained when applications are made in late summer to fall.

In annual cropping systems apply 1 to 2 quarts of this product per acre. Apply 1 quart of this product in 3 to 10 gallons of water per acre. Use 2 quarts of this product when applying 10 to 40 gallons of water per acre. In non-agricultural, or areas where annual tillage (no-till) is not practiced, apply 2 to 3 quarts of this product in 10 to 40 gallons of water per acre. For best results, apply when most plants have reached the boot-to-head stage of growth or in the fall prior to frost. Do not tank-mix with residual herbicides when using the 1 quart per acre rate.

Apply when most plants have reached the early bud stage of growth.

For control, apply 16 fluid ounces of this product plus 0.5 pound a.i. 2-A-D in 3 to 10 gallons of water per acre in the late summer or fall.

For suppression, apply 18 fluid ounces of this product plus 0.5 pound a.i. 2-A-D in 3 to 10 gallons of water per acre in the late summer or fall. If mowing has occurred prior to treatment, apply when most of the plants are 12 inches tall.

Best results are obtained when applications are made during the rosette, bolting and early flower stages.

Partial control. Apply to plants that are at or before the double-bloom stage of growth. Repeat applications may be required.

Partial control. Apply to plants that are at or beyond the double-bloom stage of growth. Repeat applications may be required.

Apply when most plants are at or beyond the boot stage of growth. After harvest, mowing or tillage in the late summer or fall, allow at least 4 weeks for initiation of active growth and resista development prior to the application of this product. Fall treatments must be applied before a killing frost. Allow 3 or more days after application before tillage.

For suppression, apply 1 quart of this product, or 1 pint of this product plus 0.5 pound a.i. 2-A-D in 3 to 10 gallons of water per acre in the late summer or fall after harvest, mowing or tillage. Allow rosette regrowth to a minimum of 6 inches in diameter before treatment. Applications can be made as long as leaves are still green and plants are actively growing at the time of application. Allow 3 or more days after application before tillage.

#### Woody Brush and Trees Rate Table Alphabetically by Species

*Apply this product after full leaf expansion, unless otherwise directed. Use the higher rate for larger plants and/or dense areas of growth. On vine, use the higher rate for plants that have reached the woody stage of growth. Best results are obtained when applications are made in late summer or fall after full leaf formation.*

Ensure thorough coverage when using hand-held equipment. Symptoms may not appear prior to frost or senescence with fall treatments. Allow 7 or more days after application before tillage, mowing or removal. Repeat treatments may be necessary to control plants regenerating from underground parts or seed. Some autumn colors on undesirable deciduous species are acceptable provided no major leaf drop has occurred. Reduced performance may result if fall treatments are made following a frost.

</tbody>
</table>

**Non-Agricultural Areas and Industrial Sites: Habitation Management; Injection and Irrigation; Ornamental and Plant Nurseries; Parks, Recreational and Residential Areas; Railroads, Roundabouts and Poopails and Eucalyptus Production**

Use in airports, apartment complexes, Christmas tree farm, field beans, dry clover, dry cereals, fenceline crops, industrial sites, lumber yards, manufacturing sites, office complexes, ornamental nurseries, parks, parking areas, petroleum tank farm, and pumping installations, railroads, recreational areas, residential areas, roadsides, sod or turf seed farms, schools, storage areas, utility substations, warehouse areas, and other public areas.

**Weed Control, Trim-and-edge and Bare Ground**

This product may be used in non-agricultural sites listed above. It may be applied with any application equipment described in this label. This product may be used to trim-and-edge around objects in the listed non-agricultural areas, for spot treatment of weedy vegetation and to eliminate unwanted weeds growing in established shrub beds or ornamental plantings. This product may be used after planting as an ornamental, ornamental, and turfgrass (seed or sod), or prior to laying asphalt or beginning construction projects.

**Repealed applications of this product may be used, as weeds emerge, to maintain bare ground.**

This product may be tank mixed with the following products. Refer to these products' labels for approved sites and application rates.

- **ARSENAL®**
- **BANVEL®**
- **BARRICADE® 65 WG**
- **DIURON**
- **ENDURANCE®**
- **ESCOR®**
- **KARMET® DF**
- **KRISHI® DF**
- **OUST®**
- **PENDIMULUM® 3.3 EC**
- **PENDIMULUM® WDG**

This product plus dicamba tank mixtures may not be applied by air in California.

When applied as a tank mixture for bare ground, this product provides control of the emerged annual weeds and control of partial control of emerged perennial weeds, woody brush, and trees.

For control or partial control of the following perennial weeds, apply 1 to 2 quarts of this product plus 2 to 4 ounces of Oust® per acre.

- **Baltgrass**
- **Bermudagrass**
- **Bromegrass**
- **Dallisgrass**
- **Dock, curly**
- **Dandelion**
- **Dogweed**

**Chemical Mowing — Perennials**

This product will suppress perennial grasses listed in this section to serve as a substitute for mowing. Use 8 fluid ounces of this product per acre when treating tall fescue, the fescue, orchardgrass or quackgrass covers. Use 6 fluid ounces of this product per acre when treating Kentucky bluegras. Apply treatments in 10 to 40 gallons of spray solution per acre.

- **Baltgrass**
- **Bermudagrass**
- **Bromegrass**
- **Dallisgrass**
- **Dock, curly**
- **Dandelion**

**Chemical Mowing — Annuals**

For growth suppression of some annual grasses including annual verna species, wild barley and wild oat growing in coarse turf on roadways or other industrial areas, apply 4 to 6 fluid ounces of this product in 10 to 40 gallons of spray solution per acre. Applications should be made when annual grasses are actively growing and before the seedheads are in the boot stage of development. Treatments may cause injury to the desired grasses.

**Dormant Turfgrass**

This product may be used to control or suppress many winter annual weeds and fall fescue for effective release of dormant bermudagrass and bahiagrass turf. Treat only when turf is dormant and prior to spring greenup.

Apply 5 to 8 fluid ounces of this product per acre. Apply rates in 10 to 40 gallons of water per acre. Use only in areas where bermudagrass or bahiagrass are desirable ground covers and where some temporary injury or discoloration can be tolerated.

Treatments in excess of 10 fluid ounces per acre may result in injury or delayed greenup in highly maintained areas including golf courses and lawns. DO NOT apply tank mixtures of this product plus Oust® in highly maintained turfgrass areas. For further use, refer to the "ROADSIDE" section of this label which gives rates for dormant bermudagrass and bahiagrass treatments.

**Acreively Growing Bermudagrass**

This product may be used to control or partially control any annual and perennial weeds for effective release of actively growing bermudagrass. DO NOT apply more than 16 fluid ounces of this product per acre in highly maintained turfgrass areas. DO NOT apply tank mixtures of this product plus Oust® in highly maintained turfgrass areas. For further use, refer to the "ROADSIDE" section of this label which gives rates for actively growing bermudagrass treatments. Use only in areas where some temporary injury or discoloration can be tolerated.

**Turfgrass renovation, seed, or sod production**

This product controls most existing vegetation prior to renovating turfgrass areas or establishing turfgrass grown for seed or sod. For maximum control of existing vegetation, delay plantings or sodding to determine if any regrowth from escaped underground plant parts occurs. Where repeat treatments are necessary, sufficient regrowth must be attained prior to application. For warm-season grasses including bermudagrass, summer or fall applications provide the best control. Where discarding vegetation is growing under mowed turfgrass management, apply this product after omitting at least one regular mowing to allow sufficient growth for good interception of the spray.

Do not disturb soil or underground plant parts before treatment. Tillage or renovation techniques such as vertical mowing, coring or slicing should be delayed for 7 days after application to allow translocation into underground plant parts.

Do not apply to or graze turfi grass grown for seed or sod production for 2 weeks following application.

**Bromus Species**

This product may be used to treat downy bromine (Bromus inermis), Japanese brome (Bromus japonicus), soft chess (Bromus mollis) and cheatgrass (Bromus rubens).
GlyPhosAte 4 plus

Specimen Label

railroAds
All of the instructions in the "non-agricultural areas and industrial sites; habitat management; injection and drill; ornamentAL and plant nurseries; parks, recreational and residential areas; railroads, roadAdvides and poplar and eucAlypSuS produc tion" section apply to railroads, bare ground, ballast and shoulders, crossings, and spot treatment.

This product may be used to maintain bare ground on railroad ballast and shoulders. Repeat applications of this product may be used, as weeds emerge, to maintain bare ground. This product may be used to control tall-growing weeds to improve line-of-sight at railroad crossings and reduce the need for mowing along rights-of-way. For crossing applications, up to 80 gallons of spray solution per acre may be used. This product may be tank-mixed with the following products for ballast, shoulder, spot, bare ground and crossings treatments:

- ARSeneD*
- BANVeL*
- DURON*
- ESCORT®
- GARLON® 3A
- GARLON® 4
- HYVAr® K

brush control
This product may be used to control woody brush and trees on railroad rights-of-way. Apply 4 to 10 quarts of this product per acre as a broadcast spray, using boom-type or boomless nozzles. Up to 80 gallons of spray solution per acre may be used. Apply 1 to 2 percent solution of this product when using high-volume spray-rigged applications. Apply a 4 to 10 percent solution of this product when using low volume directed sprays for spot treatment. This product may be mixed with the following products for enhanced control of woody brush and trees:

- ARSeneD*
- ESCORT®
- GARLON® 3A

bermuda grass release
This product may be used to control or partially control many annual and perennial weeds for effective release of actively growing bermudagrass. Apply 1 to 3 pints of this product in up to 80 gallons of spray solution per acre. Use the lower rate when treating annual weeds below 6 inches in height (or runner length). Use the higher rate as weeds increase in size or as they approach flower or seedhead formation. These rates will also provide partial control of the following perennial species:

- bahiagrass
- johnsongrass
- bluestem, silver
- trumptree/creep
- fescue, tall
- vaseygrass

This product may be tank-mixed with Oust®, if tank-mixed, use no more than 1 to 3 pints of this product with 1 to 2 ounces of Oust® per acre. Use the lower rates of each product to control annual weeds less than 6 inches in height (or runner length) that are listed in this label and the Oust® label. Use the higher rates as annual weeds increase in size and approach the flower or seedhead stages. These rates will also provide partial control of the following perennial weeds:

- bahiagrass
- fescue, tall
- blackberry
- johnsongrass
- bluestem, silver
- poodle
- bermudagrass
- raccoonreef
- dilligrass
- trumptree/creep
- dewberry
- vaseygrass
- dock, curly
- venetian, blue

Use only on well-established bermudagrass. Bermudagrass injury may result from the treatment, but regrowth will occur under moist conditions. Do not resow repeat applications in the same season since severe injury may occur.

roadsideS
All of the instructions in the "non-agricultural areas and industrial sites; habitat management; injection and drill; ornamentAL and plant nurseries; parks, recreational and residential areas; railroads, roadAdvides and poplar and eucAlypSuS produc tion" section apply to roadways.

shoulder treatments
This product may be used on road shoulders, it may be applied with boom sprayers, shielded boom sprayers, high-volume off-center nozzles, hand-held equipment, and similar equipment.

guardrails and other obstacles to mowing
This product may be used to control weeds growing under guardrails and around dingoons and other objects along the roadway.

Spot treatment
This product may be used as a spot treatment to control unwanted vegetation growing along roadways.

acorns (found in industrial, rangeland and pasture sites. Apply 8 to 16 fluid ounces of product per acre on a broadcast basis. For test results, treatment should coincide with early seedhead emergence of the most mature plants. Delaying the application until this growth stage will maximize the emergence of other woody grass flushes. Applications should be made to the same site each year until sterilized burrs are depleted and the desirable perennial grasses are able to become established on the site.

Molasses: To treat molasses, apply 15 fluid ounces of this product per acre as emulsionizing plants are actively growing, and prior to the 4 leaf stage. Applications may be made in the fall or spring.

Application Equipment and Techniques: Applications may be made using ground or aerial equipment. Aerial applications for these uses may be made using fixed wing or helicopter equipment. For aerial applications, apply in 5 to 10 gallons of water per acre. For applications using ground equipment, apply in 10 to 20 gallons of water per acre.

When applied as directed there are no grazing restrictions.

Habitat Management
Habitat Restoration and Management
This product may be used to control exotic and other undesirable vegetation in habitat management and natural areas, including rangeland and wildlife refuges. Applications can be made to allow recovery of native plant species, prior to planting desirable native species, and for similar broad-spectrum vegetation control requirements. Spot treatments can be made to selectively remove unwanted plants for habitat management and enhancement.

Wildlife Food Plots
This product may be used as a site preparation treatment prior to planting wildlife food plots. Any wildlife food species may be planted after applying this product, or native species may be allowed to regenerate in the area. Ifillage is needed to prepare a seedbed, wait 7 days after application before tillage to allow translocation into underground plant parts.

Injection and Drill (Woody Brush and Trees)
This product may be used to control woody brush and trees by injection or drill applications. Apply this product using suitable equipment which must penetrate into the living tissue. Acop the equivalent of 1 mL of this product per 2 to 3 inches of trunk diameter at breast height (DBH). This is best achieved by applying a soil to 50 to 100 percent concentration of this product either to a continuous drill in the tree or at equal spaced areas around the tree below all branches. As tree diameter increases in size, better results are achieved by applying diluted material to a continuous drill or more closely spaced cuts. Avoid application techniques that allow runoff to occur from tilled or cut areas in species that exude sap freely. In species such as this, make the drills or cuts at an off-set angle to produce a cupping effect and use a 100 percent concentration of this product. For other species, application should be made during periods of active growth and after full leaf expansion. This product will control many species, some of which are listed below:

Control
- Oak
- Pecan
- Sweetgum
- Sycamore

Partial Control
- Black gum
- Espalier

Oriental Randal Plant Nurseries, Christmas Trees
Post-direct, trim-end edge
This product may be used as a post-direct spray around established woody ornamental species including arborvitaes, azalea, boxwood, orange, euonymus, fir, Douglas fir, ficus, hollies, ficus, magnolia, maple, oak, privet, pine, spruce and yew. This product may also be used to trim and edge around trees, buildings, sidewalks and roads, potted plants and other objects in a nursery setting.

Desirable plants may be protected from the spray solution by using shields or covering made of cardboard or other impermeable material. DO NOT USE THIS PRODUCT AS AN OVER-THE-TOP BROADCAST SPRAY IN ORNAMENTAL AND CHRISTMAS TREES. Care must be exercised to avoid contact of spray, drift or mist with foliage or green bark of established ornamental species.

Site preparation
This product may be used prior to planting any ornamental, nursery or Christmas tree species.

Greenhouse/Shadehouse
This product may be used to control weeds growing in and around greenhouses and shadehouses. Desirable vegetation must not be present during application and air circulation fans must be turned off.

Parks, Recreational and Residential Areas
This product may be used in parks, residential and recreational areas. It may be applied with any application equipment described in this label. This product may be used to trim-and-edge around walks, paths, around buildings, sidewalks or other objects in these areas. This product may be used for spot treatment of unwanted vegetation. This product may be used to eliminate unwanted weeds growing in established shrub beds or ornamental plantings. This product may be used prior to planting an area of ornamentals, flowers, turfgrass (seed or seed), or prior to laying asphalt or beginning construction projects.

All of the instructions in the "non-agricultural areas and industrial sites; habitat management; injection and drill; ornamental and plant nurseries; parks, recreational and residential areas; railroads, roadides and poplar and eucalyptus production" section apply to parks and recreational areas.
This product may be tank-mixed with the following products for shoulder, guardrail, spot and bare ground treatments:

BAWELL®
DIURON
ENDURANCE®
ESCORT®
KROVAT® DF
OUST®
PENKULLAM 5.3 EC
PENKULLAM WDG
PRINCIP® DF

The product may be used to control or partially control many annual weeds and tall fescue for effective release of dormant bermudagrass or bahiagrass. Treat only when turf is dormant and prior to spring greenup. This product may also be tank-mixed with Oust® for residual control. Tank mixtures of this product with Oust® may delay greenup.

For best results on winter annuals, treat when plants are at an early growth stage (below 6 inches in height) after frost has occurred. For best results on tall fescue, treat when fescue is at or beyond the 4 to 6-leaf stage.

Apply 8 to 16 fluid ounces of this product per acre alone or in a tank mixture with 1 to 2 ounces of Oust®. Apply the rates in 10 to 40 gallons of water per acre. Use only in areas where bermudagrass or bahiagrass is desirable cover crops and where some temporary injury or discoloration can be tolerated. To avoid delays in greenup and minimize injury, add no more than 1 ounce of Oust® per acre on bermudagrass and no more than 0.5 ounce of Oust® per acre on bahiagrass and avoid treatments when these grasses are in a semi-dormant condition.

Active growing bermudagrass

This product may be used to control or partially control many annual and perennial weeds for effective release of actively growing bermudagrass. Apply 1 to 3 pounds of this product in 10 to 40 gallons of spray solution per acre. Use the lower rate when treating annual weeds below 6 inches in height (or runner length). Use the higher rate as weeds increase in size or as they approach flower or seedhead formation. These rates will also provide partial control of the following perennial species:

Bahiagrass
Bluestem, silver
Fescue, tall
Vaseygrass

This product may be tank-mixed with Oust®. If tank-mixed, use no more than 1 to 2 pounds of this product with 1 to 2 ounces of Oust® per acre. Use the lower rates of each product to control annual weeds less than 6 inches in height (or runner length) that are listed in this label and the Oust® label. Use the higher rates as annual weeds increase in size and approach the flower or seedhead stages. These rates will also provide partial control of the following perennial weeds:

Bahiagrass
Bluestem, silver
Broomegrass
Dallisgrass
Dock, curly
Dogfennel
Fescue, tall

Use only on well-established bermudagrass. Bermudagrass injury may result from the treatment, but regrowth will occur under moist conditions. Do not make repeat applications of the tank mix in the same season since severe injury may occur.

Active growing bahiagrass

For suppression of vegetative growth and seedhead inhibition of bahiagrass for approximately 45 days, apply 8 fluid ounces of this product in 10 to 40 gallons of water per acre. Apply up to 2 weeks after full green-up or after mowing to a uniform height of 4 inches. This application must be made prior to seedhead emergence.

For suppression up to 120 days, apply 4 fluid ounces of this product per acre, followed by an application of 3 to 4 fluid ounces per acre about 45 days later. Make no more than 2 applications per year.

A tank mixture of this product plus Oust® may be used. Apply 6 fluid ounces of this product plus 0.25 ounces of Oust® per acre 1 to 2 weeks following an initial spring mowing. Make only 1 application per year.

Types of applications:

Preplant, in-crop

Preplant

Use instructions: Use this product prior to planting Populus spp. This includes, but is not limited to, hybrid poplars and hybrid cottonwoods.

In-Crop

Use instructions: Directed sprays. Use a 2 percent spray solution as a spray-to-wet application for the control of undesirable woody brush and trees. To control herbaceous weeds, use a 1 to 2 percent solution. Avoid contact of spray, drift, or mist with foliage, green bark or non-woody surface roots of the Populus spp.

Wipers: This product may be used through wick or other suitable wiper applicators for control or partial control of grass and broadleaf weeds listed in this label. For wick applications, mix 1 gallon of this product with 2 gallons water to make a 30% solution. For wiper systems that can handle thicker solutions, such as force-fed systems, a 33 to 100% Glyphosate 4 Plus solution may be used. For best results ensure that the herbicide solution is allowed to contact the maximum amount of leaf surface. As weed densities increase, decrease equipment speed to allow sufficient herbicide flow to wet all weed surfaces contacted. Weeds not contacted will not be affected.

Precautions, restrictions: Avoid herbicide contact with desirable vegetation. Desirable vegetation contacted by the herbicide solution may be injured or controlled. This includes foliage, fruit, or green stems.

Eucalyptus production

Types of applications: Preplant, directed spray (spray-to-wet), wiper

Preplant

Use this product prior to planting eucalyptus species.

Ground broadcast spray: Use the rates of this product in 3 to 60 gallons of water per acre as a broad-bead spray unless otherwise specified.

In established eucalyptus

This product can be used around established eucalyptus trees to control undesirable vegetation.

Directed sprays (spray-to-wet applications): Use a 1 to 2 percent spray solution to control herbaceous weeds in eucalyptus stands. Use a 2 percent spray solution for control of undesirable woody brush and trees. For "hard-to-control" weeds, use a 5 to 10 percent spray solution. Avoid contact of spray, drift, or mist with foliage, green bark or non-woody surface roots of eucalyptus plant.

Wipers: This product may be used through wick or other suitable wiper applicators for control or partial control of grass and broadleaf weeds listed in the "WEEDS CONTROLLED" section below. For wick applications, mix 1 gallon of this product with 2 gallons water to make a 30% solution. For wiper systems that can handle thicker solutions, such as force-fed systems, a 33 to 100% Glyphosate 4 Plus solution may be used. For best results, ensure that the herbicide solution is allowed to contact the maximum amount of leaf surface. As weed densities increase, decrease equipment speed to allow sufficient herbicide flow to wet all weed surfaces contacted. Weeds not contacted will not be affected.

Precautions, restrictions: Avoid herbicide contact with desirable vegetation. Desirable vegetation contacted by the herbicide solution may be injured or controlled. This includes foliage, fruit, or green stems.

Weeds controlled:

Always use the higher rate of this product per acre within the specified range when weed growth is heavy or dense or weeds are growing in an undisturbed (noncultivated) area.

Reduced rate may occur when treating weeds heavily covered with dust. For weeds that have been mowed, grazed or cut, allow regrowth to occur prior to treatment.

Refer to the following label sections for rates for the control of annual and perennial weeds and woody brush and trees. For difficult to control perennial weeds and woody brush and trees, where plants are growing under stressed conditions, or where mowing treatments are dense, this product may be used at 2 quarts per acre for enhanced results.

Annual weeds:

Use this product per acre as described above. Use the rates of this product per acre as described above. For annual weeds, use the rates described above for annual weeds growing under stressed conditions.

For spray-to-wet applications, apply a 0.5 percent solution of this product to weeds less than 6 inches in height or runner length and 1.5 to 4 quarts per acre if weeds are over 6 inches in height or runner length or when weeds are growing under stressed conditions.

For spray-to-wet applications, apply a 0.5 percent solution of this product to weeds less than 6 inches in height or runner length and 1.5 to 4 quarts per acre if weeds are over 6 inches in height or runner length or when weeds are growing under stressed conditions.

### PERENNIAL WEEDS

Best results are obtained when perennial weeds are treated after they reach the reproductive stage of growth (seed head initiation in grasses and bud formation in broadleaves). For non-flowering plants, best results are obtained when the plants reach a mature stage of growth. In many situations, treatments are required prior to these growth stages. Under these conditions, use the higher application rate specified within the recommended range.

Ensure thorough coverage when using spray-to-wet treatments using hand-held equipment. When using hand-held equipment for low volume directed spot treatments, apply a 5 to 10 percent solution of this product. Allow 7 or more days after application before tillage.

---

### WOODY BRUSH AND TREES

Apply this product after full leaf expansion, unless otherwise directed. Use the higher rate for larger plants and/or stems away of growth. On vines, use the higher rate for plants that have reached the woody stage of growth. Best results are obtained when application is made in late summer or fall after fruit formation.

In dry areas, best results are obtained when applications are made in the spring to early summer when brush species are at a high moisture content and are flowering.

Ensure thorough coverage when using spray-to-wet treatments using hand-held equipment. When using hand-held equipment for low volume directed-spray spot treatments, apply a 5 to 10 percent solution of this product. Allow 7 or more days after application before tillage.

#### Weed Species Rate (QT/A) Hand-Held % Solution

| Alder | 3-4 | 1-1.5 |
| Ash* | 2-6 | 1-3 |
| Aspen, quaking | 2-3 | 1-1.5 |
| Beartree (Beecrow)* | 2-6 | 1-2 |
| Beech* | 2-6 | 1-2 |
| Birch | 2 | 1 |
| Blackberry | 3-4 | 1-1.5 |
| Blackmul | 2-5 | 1-2 |
| Blackberry | 2-5 | 1-2 |
| Brown, French, Scotch | 2-5 | 1-2 |
| Buckwheat, California* | 2-4 | 1-2 |
| Cercis* | 2-5 | 1-2 |
| Celandine* | - | 1-1.5 |
| Carpenteria* | 2-5 | 1-2 |
| Chamise* | 2-6 | 1 |
| Cherry, bitter, black, pin | 2-3 | 1-1.5 |
| Coyote brush | 3-4 | 1.5-2 |
| Deerweed | 2-6 | 1 |
| Dogwood* | 2-6 | 1-2 |
| Elderberry | 2 | 1 |

---

### WOODY BRUSH AND TREES

Apply this product after full leaf expansion, unless otherwise directed. Use the higher rate for larger plants and/or stems away of growth. On vines, use the higher rate for plants that have reached the woody stage of growth. Best results are obtained when application is made in late summer or fall after fruit formation.

In dry areas, best results are obtained when applications are made in the spring to early summer when brush species are at a high moisture content and are flowering.

Ensure thorough coverage when using spray-to-wet treatments using hand-held equipment. When using hand-held equipment for low volume directed-spray spot treatments, apply a 5 to 10 percent solution of this product. Allow 7 or more days after application before tillage, mowing or removal. Repeat treatments may be necessary to control plants regenerating from underground parts or seed. Some summer colors on undesirable deciduous species are acceptable provided no major leaf drop has occurred. Reduced performance may result if fall treatments are made following a frost.

#### Weed Species Broadcast Rate (QT/A) Hand-Held % Solution

CONDITION OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

To the extent consistent with applicable law, upon purchase or use of this product, Purchaser and User agree to the following terms:

**Warranty:** Allpure, LLC (the Company) warrants that this product conforms to the chemical description on the label in all material respects and is reasonably fit for the purpose referred to in the directions for use, subject to the exceptions noted below, which are beyond the Company's control. In the event consistent with applicable law, the Company makes no other representation or warranty, express or implied, concerning the product, including any implied warranty of merchantability or fitness for a particular purpose. No such warranty shall be implied by law and no agent or representative is authorized to make any such warranty on the Company's behalf.

**Terms of Sale:** The Company's directions for use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, and the manner of use or application (including failure to adhere to label directions), all of which are beyond the Company's control. To the extent consistent with applicable law, all such risks are assumed by the user.

**Limitation of Liability:** To the extent consistent with applicable law, the exclusive remedy against the Company for any cause of action relating to the handling or use of this product is a claim for damages, and in no event shall damages or any other recovery of any kind exceed the price of the product which caused the alleged loss, damage, injury or other claim. To the extent consistent with applicable law, under no circumstances shall the Company be liable for any special, indirect, incidental or consequential damages of any kind, including loss of profits or income, and any such claims are hereby waived. Some states do not allow the exclusion of or limitation of incidental or consequential damages. The Company and the seller offer this product, and the purchaser and user accept this product, subject to the foregoing warranty, terms of sale and limitation of liability, which may be varied or modified only by an agreement in writing signed on behalf of the Company by an authorized representative.
